AND GENDER EQUALITY IN HEALTH SECTOR STRATEGIES
HOW TO ASSESS POLICY COHERENCE
HUMAN RIGHTS AND GENDER EQUALITY IN HEALTH SECTOR STRATEGIES

HOW TO ASSESS POLICY COHERENCE
Acknowledgements

This tool was developed by the departments of Ethics, Equity, Trade and Human Rights and Gender, Women and Health of the World Health Organization (WHO), the Office of the High Commissioner for Human Rights (OHCHR) and the Swedish International Development Cooperation Agency (Sida). The technical team responsible for tool development includes Shelly N. Abdool, Helena Nygren-Krug, Adepeju Olukoya and Annelie Rostedt (WHO), Alfonso Barragués (OHCHR) and Birgitta Sund and Eva Wallstam (Sida).

The team is grateful for technical and administrative inputs from (alphabetically, by agency):

OHCHR: Melinda Ching Simon, Mac Darrow, Rosa Da Costa, Lisa Oldring, Thomas Pollan, Juana Sotomayor and Viet Tu Tran.

Sida: Anette Dahlström, Lena Ekroth, Eva Nauckhoff, Göran Paulsson, Helena Reuterswärd, and all participants of the November 2008 consultation.

Others: Sarah Thomsen, Saskia Bakker.

Countries involved in the development, piloting and finalization included the following country teams:

Yemen – Mona Al Mudwahi, Eman Al Kobaty, Fatima Elawah and Jameela Al Raiby.

Zambia – Nicholas Chikwenya, David Chimfembwe and Vincent Musowe.

The technical team is grateful to all country participants for their time and inputs.

About the Tool

Human Rights and Gender Equality in Health Sector Strategies: how to assess policy coherence is designed to support countries as they design and implement national health sector strategies in compliance with obligations and commitments. The tool focuses on practical options and poses critical questions for policy-makers to identify gaps and opportunities in the review or reform of health sector strategies as well as other sectoral initiatives. It is expected that using this tool will generate a national multi-stakeholder process and a cross-disciplinary dialogue to address human rights and gender equality in health sector activities.

The tool is intended for use by various actors involved in health planning and policy making, implementation or monitoring of health sector strategies. These include (but are not limited to) ministries of health and other sectors, national human rights institutions, development partners and civil society organizations. The tool provides support, as opposed to a set of detailed guidelines, to assess health sector strategies. It is not a manual on human rights or gender equality, but it does provide users with references to other publications and materials of a more conceptual and normative nature. The tool aims to operationalize a human rights-based approach and gender mainstreaming through their practical application in policy assessments.

The tool, adaptable to different country contexts, is composed of three parts:

- A. Conceptual approaches of the tool
- B. Practical guidance on how to use the tool
- C. Analysis tables

The analysis tables in Part C constitute the backbone of the tool and are designed to guide the user through three separate assessment levels: 1) State obligations and commitments, 2) national legal, policy and institutional frameworks, and 3) health sector strategies, using the various components/building blocks of a health system.

A. GETTING TO KNOW
THE TOOL

GETTING TO KNOW THE TOOL
A. GETTING TO KNOW THE TOOL

1. Introduction

1.1 Background and rationale

The basic premise of this tool is that aligning national health sector strategies with obligations and commitments on human rights and gender equality is not only the right thing to do, ethically and legally, it also leads to better, more sustainable and equitable results in the health sector.

Every UN Member State has undertaken international legal obligations for human rights. More than 80 per cent of Member States have ratified 4 or more of the 9 core international human rights treaties. There is near-universal ratification for the Convention on the Rights of the Child (CRC) and the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), both of which recognize health as a human right, the importance of gender equality and several other rights relating to underlying determinants of health. Further, international consensus documents such as the Cairo Programme of Action and the Beijing Platform for Action, the Millennium Declaration and the Millennium Development Goals provide guidance on some of the policy implications of placing health at the centre of development agendas, meeting governments’ human rights obligations and reinforcing commitments to promoting gender equality and women’s empowerment. Moreover, the World Health Assembly (WHA) – the governing body of the World Health Organization (WHO) – adopts resolutions to guide and direct the WHO Secretariat and the Member States of WHO in the field of health, including gender equality and health-related human rights. Greater efforts are needed to help Member States fulfil goals and obligations such as those outlined in Box 1. This includes ensuring that national health sector strategies are consistent with, and further reinforce, human rights standards and principles and gender equality.

Historically, international human rights law did not effectively address women’s human rights, and women were even excluded from participating in its early development. Initially, the right to health was also narrowly interpreted to exclude women’s needs and experiences and failed to address obstacles faced by women in making decisions pertaining to health and obtaining health-related services. The adoption of CEDAW in 1979 marked a turning point. CEDAW’s preamble explains that, despite the existence of other instruments in which principles of equality and non-discrimination exist, women still do not have equal rights with men. Today, particular focus is still needed towards realizing women’s human rights. While CEDAW is almost universally ratified, it is also the treaty with the highest number of reservations, presenting significant obstacles to its effective implementation.

In relation to health, CEDAW sets out specific provisions with respect to women’s sexual and reproductive health rights. Years later, the International Conference for Population and Development Programme of Action and Beijing Platform for Action called for increased attention and action around women’s sexual and reproductive health rights. The Beijing Platform for Action, among other mechanisms, broadened approaches to women’s health to include a range of other risk factors and conditions that contribute to women’s ill health and mortality; Strategic Objective C (women’s health) and D (violence against women) are of particular note. This is in line with holistic approaches to women’s health that address the determinants of their health including and beyond reproductive health matters. Indeed, the WHO report on Women and Health highlights that sexual and reproductive health is central to women’s health. However, high rates of morbidity and mortality
among women from all countries are attributable to non-communicable diseases, violence and injuries and mental health. These areas require urgent attention in a gender and human rights-based approach to women's health.

The Declaration of Alma-Ata, adopted at the Alma-Ata Conference of 1978 on Primary Health Care (PHC), affirmed health as a fundamental human right. This was consistent with the International Covenant on Economic, Social and Cultural Rights (ICESCR), Article 12, which enshrined the right to the enjoyment of the highest attainable standard of physical and mental health in 1966.

The 2008 World Health Report and the WHA resolution 62.12 take forward the values pursued in the Declaration of Alma-Ata: social justice, the right to health for all, participation, equity and solidarity. The PHC policy directions aim at achieving universal access and social protection; reorganizing service delivery around people's needs and expectations; securing healthier communities through better public policies across sectors; and remodelling leadership for health around more effective government and active participation of key stakeholders.

**Box 1**

**Selected Action Oriented Policy Commitments to Human Rights and Gender Equality**

1993 – The Vienna Declaration and Programme of Action affirmed that the human rights of women and girls are inalienable, integral and indivisible parts of universal human rights and that the equal status and human rights of women should be integrated into the mainstream of UN system-wide activity.

1995 – The Beijing Declaration and Platform for Action stated that, "in addressing violence against women, Governments and other actors should promote an active and visible policy of mainstreaming a gender perspective in all policies and programmes so that before decisions are taken an analysis may be made of their effects on women and men, respectively."

2000 – In the UN Millennium Declaration, Member States resolved "to combat all forms of violence against women and to implement the Convention on the Elimination of All Forms of Discrimination against Women" while calling for "the promotion of gender equality and the empowerment of women..."

2005 – At the 2005 World Summit, UN Member States recognized the "importance of gender mainstreaming as a tool for achieving gender equality" undertaking to "actively promote the mainstreaming of a gender perspective in the design, implementation, monitoring and evaluation of policies and programmes in all political, economic and social spheres". Member States also unanimously resolved "to integrate the promotion and protection of human rights into national policies".

2008 – The Accra Agenda for Action, which aimed to accelerate the implementation of the Paris Declaration on Aid Effectiveness, commits developing countries and donors to "ensure that their respective development policies and programmes are designed and implemented in ways consistent with their agreed international commitments on gender equality, human rights, disability and environmental sustainability".

2010 – At the 2010 Follow-up to the Outcome of the Millennium Summit, UN Member States "recognise(d) that the respect for and promotion and protection of human rights is an integral part of effective work towards achieving the MDGs." In the same year, the UN General Assembly unanimously established the Entity on Gender Equality and the Empowerment of Women, known as UN Women. The new composite entity began official operations on 1 January 2011 and will report to the General Assembly through ECOSOC.
The right to "the highest attainable standard of physical and mental health" is not confined to the right to health care. The right to health embraces a wide range of socio-economic factors that promote conditions in which people can lead a healthy life, and extends to the underlying determinants of health, such as food and nutrition, housing, access to safe and potable water and adequate sanitation, safe and healthy working conditions, and a healthy environment. The underlying determinants of health, when neglected, can lead to health inequities, which are understood as unfair and avoidable differences in health status within and between countries. In 2005, the WHO established the Commission on Social Determinants of Health to provide advice on how to reduce persistent and widening inequities. The report of the Commission and the WHA resolution 62.14 provide specific recommendations on reducing health inequities through action on the underlying determinants of health15,16.

Given the many inter-linkages between PHC, underlying determinants of health, a HRBA and gender mainstreaming, the present tool contributes to the implementation of the various declarations, resolutions and policy commitments (see Box 1) mentioned here.

A human rights-based approach and gender mainstreaming add value to health sector strategies and actions by:

- contributing to the reduction of gender-based (and other) health inequities;
- supporting the overall health system and ensuring that health systems functions such as health information, health financing, and leadership and governance (including policy-making) create sustainable, enabling environments for health services to be organized and delivered in equitable ways;
- supporting transparent and accountable strategies to empower women and men – especially the most marginalized – to participate in policy formulation, implementation, monitoring and evaluation;
- supporting and facilitating linkages with other sectors that impact upon health (see Box 2 for one such example);
- ensuring that they give priority attention to issues that concern the health of vulnerable and marginalized groups;
- ensuring that they address gender inequalities and redress discriminatory practices and unjust distributions of power that impede progress towards the MDGs and other health development goals.

Box 2

"HRBA helps us to understand that maternal mortality is not simply an issue of public health but the consequence of multiple unfulfilled rights. A woman suffering from chronic malnutrition, who lives in a slum without access to safe water and sanitation and who does not have an education, is at a much higher risk of dying during pregnancy or childbirth. The same woman is at an even higher risk of dying if she is aged between 15 to 19, has suffered female genital mutilation, an early or forced marriage, gender-based violence or sexual exploitation. She would be more exposed if she has HIV/AIDS or if she is discriminated in her private and public life because she belongs to an indigenous group or because of her race, or for being an irregular migrant worker. In order to ensure that vulnerable women and girls in remote rural parts of a country have access to family planning, skilled attendants at birth and access to emergency obstetric care without delays, public policies must address broader human rights issues, rather than simply deliver a set of technical interventions. A failure to do so, might continue to condemn millions to be neglected in the fulfilment of the MDGs."

Navanethem Pillay,
United Nations High Commissioner for Human Rights
1.2 Objectives and target-audience

The overall aim of the tool is to enhance coherence between: international obligations and commitments; national legal, policy and institutional frameworks; and health sector strategies with respect to human rights and gender equality.

The specific objectives of the tool are to:

1. Assess the extent to which health sector strategies are consistent with, and promote, human rights standards and principles, including gender equality.
2. Identify gender equality and human rights-related gaps and opportunities with respect to national commitments and health sector strategies, in order to facilitate effective relevant and strategic health sector interventions.

The tool addresses various actors in health planning, policy-making, implementation and/or monitoring of health sector strategies. This includes health policy-makers and planners, national human rights institutions, development partners and CSOs. Its use will vary depending on the specific context and focus of the assessment exercise. However, ideally the tool supports:

- a review of – or preparation for a new – health sector strategy;
- other studies to evaluate or assess a health sector strategy.

The tool is not exhaustive and does not provide a set of detailed guidelines. The tool can be adapted to different country contexts.

1.3 Scope, assessment levels and outline of the tool

Effective implementation of State obligations and commitments on human rights and gender equality, as expressed in international consensus documents and through the ratification of human rights treaties, requires that such obligations and commitments are also reflected in national legislation, policies, institutional frameworks and sectoral strategies. The scope of the current tool is focused on health sector strategies. Health strategies are plans which set out how a government intends to move forward in meeting its obligation to realize health as a human right and to ensure progressive measures towards gender equality within a specific time frame. As such, the tool is not issue/disease-specific but considers, more broadly, the health system as a whole. It seeks to review the legal, policy and institutional environment of the health strategy, as well as its contents in light of the various components of a well-functioning health system, and human rights and gender equality obligations and commitments.

This tool is based on three assessment levels as reflected in Figure 1. Presumably, there should be coherence between international obligations and commitments on human rights and gender equality, the national legal, policy and institutional frameworks, and health sector strategies. However, such coherence is not always "top down", nor is it static or linear. Legislation, policies and strategies change over time and amendments are made regularly.
Assessment level 1: State obligations and commitments made on human rights and gender equality

The first assessment level aims to clarify specific State obligations and commitments on human rights and gender equality. For example, has the State ratified core human rights treaties and followed up on recommendations from UN treaty bodies; agreed to implement key consensus documents such as the Beijing Platform for Action (and subsequent reviews and follow-ups); or engaged with the HRC and special procedures?

Assessment level 2: Translating human rights and gender equality obligations and commitments in the national legal, policy and institutional framework

The second assessment level reviews if and how governments have applied human rights standards and principles, and promoted gender equality in national legislation, development plans, and the institutional framework.

Assessment level 3: Identifying human rights and gender equality obligations and commitments in national health sector strategies

The third assessment level analyses the incorporation of human rights standards and principles and gender equality elements into the health sector strategy document according to six health systems components (see Box 3), based on the WHO framework for action on strengthening health systems. Each system component/building block is further elaborated and explained in Part C, Section 3 – Assessment Level 3: Health Sector Strategy.

Figure 1 – Scope of the tool: three levels of assessment
Box 3

**WHO framework for action on health systems**

1. Leadership and governance (stewardship)
2. Service delivery
3. Health workforce
4. Information
5. Medical products, vaccines and technologies
6. Financing

Ideally, all three assessment levels should be part of a review. However, it is also possible to use only selected parts of the tool, depending on the purpose of the review.

**Outline of the tool**

The tool consists of three parts. Part A includes an introduction and an overview of the approach. Part B includes practical guidance on how to implement the tool. Part C includes the analysis tables with background information and additional guidance to support the review of health sector strategies.

A. GETTING TO KNOW THE TOOL

A.1. **Introduction:** background and rationale, aim and objectives, scope, assessment levels and outline of the tool.

A.2. **Approach:** overview of the conceptual approaches guiding the tool. The conceptual approaches used are HRBA and gender mainstreaming which are both grounded in international human rights law.

B. PROCESS

B.1. **Practical guidance for using the tool:** Tips on planning and process, sources of information, data collection and analysis, dissemination of results and catalysing action.

C. ANALYSIS TABLES

C.1. **Assessment level 1:** State obligations and commitments to human rights and gender equality. The review of these commitments provides the basis for the subsequent analysis of central health sector documents.

C.2. **Assessment level 2:** Legal, policy and institutional framework for promoting human rights and gender equality. The review supports the understanding of the context in which health sector strategies are developed.

C.3. **Assessment level 3:** Health sector strategies. The analysis of national health strategies is structured in part according to the overall priorities and objectives and in part around different building blocks of the health system’s framework. It incorporates key human rights and gender equality elements.

**Annexes:**

1. Key readings and resource materials
2. Feedback questionnaire
2. Approach

2.1 Human rights-based approach and gender mainstreaming

This tool is anchored in a HRBA and gender mainstreaming.

A HRBA applies a conceptual framework to understand the causes of (non-)fulfilment of human rights. It is based on international human rights standards and principles and it develops the capacities of rights-holders to claim their rights and duty-bearers to fulfil their commitments. A HRBA has a normative value as a set of universally agreed values, standards and principles. A HRBA also aims to support better and more sustainable health outcomes by analysing and addressing the inequalities, discriminatory practices (intentional and non-intentional) and unequal power relations that are often at the heart of development challenges. The use of a HRBA is guided by the Stamford Statement of a Common Understanding on a Human Rights Based Approach to Development Cooperation, outlined in Box 4.

Box 4

The Common Understanding on a Human Rights Based Approach to Development Cooperation

Goal: All programmes of development cooperation, policies and technical assistance should further the realization of human rights as laid down in the Universal Declaration of Human Rights (UDHR) and other international human rights instruments.

Process: Human rights standards and principles guide all development cooperation and programming in all sectors and phases of the programming process.

Outcome: Development cooperation contributes to the development of the capacities of "duty-bearers" to meet their obligations and/or of "rights-holders" to claim their rights.

Promoting gender equality and reducing gender-based discrimination are at the heart of a HRBA. If health-care systems are to respond adequately to problems caused by gender inequality, it is not enough to simply "add in" a gender component late in the implementation phase. The system must be designed to address gender norms, roles and relations from the outset. This is the basis of gender mainstreaming.

Gender mainstreaming is a long-term process and strategy that aims to reflect women's and men's concerns and experiences as an integral part of the design, implementation, monitoring and evaluation of all sectoral policies and programmes, including health. The ultimate goal is to achieve gender equality.
2.2 Human rights and gender equality concepts used in the tool

The tool requires a systematic review of the health strategy and other relevant documents and processes through the framework of human rights and gender equality.

Advancing gender equality is a requirement of a HRBA\textsuperscript{22}; therefore, gender mainstreaming methods must be effectively applied. Combining the two approaches upholds commitments in the Millennium Declaration\textsuperscript{7}, the 2007 HRC resolution 6/30 (\textit{Integrating the human rights of women throughout the United Nations system})\textsuperscript{23} and the UN System-Wide Policy on gender equality and the empowerment of women\textsuperscript{24}.

Methods such as gender analysis and increased involvement of women in decision-making are fundamental to realizing human rights – and in particular, women’s human rights. Specifically, gender analysis in health examines how biological and sociocultural factors interact to influence health behavior, outcomes and services. It also uncovers how gender inequality affects health and well-being. Critical questions on where, how and why women or men are affected by a particular condition help to uncover root causes of illness and disease and to shed light on risk-factor exposure and vulnerability that women and men experience\textsuperscript{25}. Gender analysis further enables identification of women’s health needs beyond sexual and reproductive health\textsuperscript{26}.

**Human Rights Concepts**

**Human rights standards** are legal guarantees protecting universal values of human dignity and freedom. They encompass civil, cultural, economic, political and social rights. All human rights are interdependent and interrelated. The standards define the rights and entitlements of all women and men, boys and girls, and the corresponding obligations of the State as the primary duty-bearer. Human rights standards have been negotiated by States and agreed upon in human rights treaties, such as conventions and covenants, which are legally binding on State parties.

**Box 5**

“Even if he can vote to choose his rulers, a young man with AIDS who cannot read or write and lives on the brink of starvation is not truly free. Equally, even if she earns enough to live, a woman who lives in the shadow of daily violence and has no say in how her country is run is not truly free.

**Larger freedom** implies that men and women everywhere have the right to be governed by their own consent, under law, in a society where all individuals can, without discrimination or retribution, speak, worship and associate freely.

They must also be **free from want** – so that the death sentences of extreme poverty and infectious disease are lifted from their lives – and **free from fear** – so that their lives and livelihoods are not ripped apart by violence and war."

A key human rights standard for the purposes of this tool is the right to the enjoyment of the highest attainable standard of physical and mental health, often referred to as “the right to health”. It is recognized in the ICESCR and some of its key elements are also found in five other international treaties. The UN Committee on Economic, Social and Cultural Rights (CESCR), which monitors compliance with the ICESCR, adopted General Comment 14 on the right to health to clarify the contents of this right and support its implementation.

General Comment 14, as diagrammed on page 18, clarifies that the right to health is an inclusive right, extending beyond health care to underlying determinants of health, such as access to safe and potable water; adequate sanitation; adequate supply of safe food; nutrition; housing; healthy occupational and environmental conditions; access to health-related education and information, including on sexual and reproductive health; and freedom from discrimination. States have an obligation to take immediate steps to progressively ensure that health services, goods and facilities are Available, Accessible, Acceptable and of good Quality (AAAQ).

State parties to the ICESCR have three types of obligations with regard to the Right to Health:

- **Respect**: not to interfere directly or indirectly with the enjoyment of the right to health, e.g. refrain from denying or limiting access to health-care services, or marketing unsafe drugs.
- **Protect**: prevent third parties from interfering with the right to health, e.g. ensure that privatization does not constitute a threat to the accessibility, affordability and quality of services.
- **Fulfil**: adopt appropriate legislative, administrative, budgetary, judicial, promotional and other measures to fully realize the right to health, e.g. adopt a national health policy/plan covering the public and private sectors.

CESCR General Comment 14 also recommends that States integrate a gender perspective in their health-related policies, planning, programmes and research in order to promote better health for both women and men.

**Human rights principles** derive from the human rights treaties. They provide important guidance to interventions and processes. Key human rights principles in relation to health are the following:

- **The principle of equality and non-discrimination**. All individuals are equal as human beings and by virtue of the inherent dignity of each human person. All human beings are entitled to their human rights without discrimination of any kind, as to race, colour, sex, ethnicity, age, language, religion, political or other opinion, national or social origin, disability, property, birth or other status, as enshrined in all human rights treaties. This principle requires States to address discrimination (intentional and non-intentional) in laws, policies and practices, including in the distribution and delivery of resources and health services.

  The principle of equality and non-discrimination is particularly relevant for addressing gender, because the situation faced by marginalized groups of women and girls is due not only to their sex and gender roles, but also if they are a member of other vulnerable groups – such as those living with a disability or part of an ethnic minority group. This compounds the types of discrimination such groups face.
THE RIGHT TO HEALTH

UNDERLYING DETERMINANTS OF HEALTH
Access to minimum essential food, which is nutritionally adequate and safe.
Access to basic shelter, housing, safe and potable drinking water and adequate sanitation.
Education and access to information concerning the main health problems in the community, including methods of preventing and controlling them.
Promotion of gender equality.

HEALTH CARE
Right of access to health facilities, goods and services on a non-discriminatory basis, with attention to vulnerable and marginalized groups.
Equitable distribution of all health facilities, goods and services.
Provision of essential drugs, as defined under the WHO Action Programme on Essential Drugs.
Participation of affected populations in health-related decisions at the national and community levels.

AVAILABILITY, ACCESSIBILITY, ACCEPTABILITY AND QUALITY
Availability: functioning public health and health-care facilities, goods, services and programmes in sufficient quantity
Accessibility: non-discrimination, physical accessibility, economic accessibility (affordability), information accessibility
Acceptability: respectful of medical ethics, culturally appropriate, sensitive to age and gender
Quality: scientifically and medically appropriate
• The **principle of participation and inclusion** means that people are entitled to participate in decisions that directly affect them, such as the design, implementation and monitoring of health interventions. Participation should be active, free and meaningful.

• The **principle of accountability** requires governments and other decision-makers to be transparent about processes and actions, and to justify their choices (answerability). Also, there should be mechanisms in place to address grievances when individuals and organizations fail to meet their obligations (redress). Judicial, administrative, political and policy mechanisms can be used to ensure accountability at different levels.

**Box 6**

"**Human rights principles are complementary and must be pursued together. Applying just one principle will not do the job.**

*Development is more likely to be successful if everyone affected is included in the process. The involvement of individuals and communities enables them to have a say and allows the government to better understand their real needs. As a result, policies will be more responsive to the people and thus governments will be more accountable. In order to ensure that everyone benefits from development, governments must combat discrimination that marginalizes some groups and ensure their active and meaningful participation."

**Gender Concepts**

**Gender mainstreaming** is a strategy to make women’s and men’s concerns and experiences an integral part of the design, implementation, monitoring and evaluation of all sectoral policies and programmes, including health. The ultimate goal is to achieve gender equality.

**Gender** is used to describe those characteristics of groups of women and men which are socially constructed, while **sex** refers to those which are biologically determined.

**Gender equality** or equality between different groups of women and men refers to the equal enjoyment by groups of females and males – of all ages and regardless of sexual orientation or gender identity – of rights, socially valued goods, opportunities, resources and rewards. Equality does not mean that women and men are the same but that their enjoyment of rights, opportunities and life chances are not governed or limited by whether they were born female or male.

**Gender analysis** identifies and addresses inequalities and/or differences experienced by different groups of women and men. With respect to health, it explores the ways that norms, roles and relations may impact differently upon the health of women and men. Critical questions on where, how and why women or men are affected by a particular condition help to uncover root causes of illness and disease and to shed light on risk-factor exposure and vulnerability that women and men experience."
2.3 How the tool operationalizes the two approaches

A HRBA and gender mainstreaming share norms and standards of international human rights treaties and instruments, and other international agreements, such as the Millennium Declaration and the Beijing Platform for Action\(^\text{30}\). In order to determine to what extent gender norms, roles and relations are addressed, several tools and classification frameworks exist – see Box 7.

**Box 7**

**Gender terms used to classify policies, programmes or activities**

**Gender unequal**: Policies, programmes or activities that perpetuate gender inequalities by reinforcing unbalanced norms, roles and relations for women and men. They do this by either privileging men over women, or vice versa, and tend to ensure that one sex will have more rights and opportunities than the other.

**Gender blind**: Policies, programmes or activities that ignore gender norms, roles and relations, and tend to reinforce gender-based discrimination. Also referred to as *gender neutral policies*, these tend to ignore differences in opportunities and allocation of resources for women and men.

**Gender sensitive**: Indicates gender awareness, although no remedial action is developed.

**Gender specific**: Policies, programmes or activities that take account of women’s and men’s different roles, norms and responsibilities as well as their specific needs within a programme or policy. Such programmes make it easier for women and men to fulfil duties that are ascribed to them on the basis of their gender roles – without necessarily trying to change gender roles.

**Gender transformative**: Addresses the causes of gender-based health inequities by including ways to transform harmful gender norms, roles and relations. The objective of such programmes is often to promote gender equality and foster progressive changes in power relationships between women and men.

*Note*: These terms are based on the WHO Gender Responsive Scale.\(^\text{26}\)

This tool enables an assessment of health strategies based on the right to health (both health care and underlying determinants through the lens of AAAQ) as well as the principles of equality and non-discrimination, participation and accountability. It uses gender analysis to uncover how gender inequality may influence differential ways that the health of groups of women and men have been addressed in the strategy (in terms of both process, such as participation and information sources, and outcome, or what is actually reflected in the strategy). In crafting the review questions, obligations to respect, protect and fulfil human rights have been incorporated as well as core elements of the Beijing Platform for Action (health-related critical areas of concern and strategic objectives) and other international consensus documents.
Endnotes

1. The term “health sector strategy” refers to a national medium-term strategy identifying priority areas and actions to improve health outcomes. The terminology may vary between countries and other common terms are “health sector strategic plan” and “health sector plan”. The health sector strategy may be guided by a long-term “health policy”.

Boys and girls are implicitly included within the category of men and women when referred to in this publication.

PROCESS – PRACTICAL GUIDANCE FOR USING THE TOOL
B. PROCESS – PRACTICAL GUIDANCE FOR USING THE TOOL

1. Opportunities to use the tool

The tool can be useful for different purposes and by different actors. The way it is used will vary, depending on the specific context and focus of the assessment exercise. There are two intended primary uses for the tool:

1. For use by a health sector review team during an annual/mid-term review or planning exercise. A health sector review process often involves many stakeholders who review various aspects of health sector planning and implementation. In this context, elements of the tool can be incorporated into other tools and review exercises. The annual/mid-term health sector review or planning process is usually implemented under the coordination and leadership of the Ministry of Health (MoH).

2. For use by a review team for a specific study aimed at evaluating or assessing a health sector strategy from a human rights and gender equality perspective. The study may be one separate component of an overall health sector review process, or may be independently commissioned by the MoH, an international or national CSO or a development partner.

Using the tool for an assessment exercise facilitates discussions between various partners. To make the most of these discussions, it is important to prepare ahead of time for the review.

Ideally, all three assessment levels should be part of the review. However, it is also possible to use only selected parts of the tool, depending on the purpose of its use.

1.1 Use of the tool as part of a broader review or planning exercise

If the tool is used within a broader health sector review or planning process, it is important to:

1. Include human rights and gender equality as part of the overall terms of reference.

2. Integrate specific questions on human rights and gender equality into existing tools that the cross-disciplinary team will address.

3. Discuss gender equality and human rights in the appropriate context between MoH professionals and team member experts; they should not be seen or handled as an “add on” or parallel exercise.

4. Have the team review the questions and discuss how they relate to the specific country context and adapt as needed.

5. Ensure that each team member identifies, understands and is accountable for human rights and gender equality questions related to the particular level or analysis table that the team member handles.

6. Assign or appoint someone with expertise in human rights and gender equality to collect the information required under assessment levels 1 and 2 to guide the analysis of elements relating to assessment level 3 (which is likely to be the focus of the review or planning exercise).
7. Integrate the results from the use of this tool into larger team reports (such as a Mid-term review). The larger report should address human rights and gender issues both under each subheading and in a summary chapter; ensure that the results of this assessment are part of all formal reviews of health sector strategies and not seen as parallel efforts.

8. Include on the review team at least one lead person with technical and political competency regarding human rights and gender equality who can:

- ensure that human rights and gender equality issues are properly addressed;
- strengthen the capacity of other team members as needed and appropriate.

Such individuals can often be found within national human rights institutions and/or ministries of gender/social affairs as well as CSOs, think-tanks and universities.

1.2 Use of the tool for a stand-alone human rights and gender equality study

If the tool is used for a focused and separate human rights and gender equality study, the following points are important to note:

1. A national team should provide guidance and inputs to the study. Team members should have competence and experience related to:

- the workings of a national health system, health policy-making and planning, including the areas of service delivery, health workforce, health information, medicines and health financing;
- human rights concepts and a HRBA to programming and gender mainstreaming, ideally in the area of health. Annex 1 contains key readings and resource materials in the area of health sector strategies, human rights and gender equality. For those team members responsible for ensuring human rights expertise, an e-learning kit referred to in Annex 1 can be useful. It contains two modules (45 minutes each).

2. The national team should also purposely include both women and men to ensure attention to potential gender-related barriers for both groups. The team should ideally include male and female representatives of government institutions (MoH, Ministry of Gender, NHRIs, etc.) and CSOs with expertise in the areas of human rights, gender equality and health.

3. A national coordinator should be designated – or endorsed – by the national government, for example, the MoH. The responsibilities of the coordinator include:

- ensure effective planning and coordination of the study, including capacity-building of team members (as required) and information sharing with national and international health development partners, CSOs, health professional associations and other sectors/ministries;
- facilitate regular meetings between national team members and researchers, to discuss results, analysis and recommendations;
- support effective sharing and dissemination of findings with a range of health actions at national and sub-national levels.
4. One or two people should be identified to work full-time on the data gathering, initial analysis and report writing. They should have expertise in the areas of human rights and gender equality relating to public health policies. Their responsibilities include:

> review relevant documents and conduct interviews to collect the information required in the analysis tables;
> share findings, initial analysis and recommendations with national team members for inputs, interpretation and recommendation drafting;
> prepare and/or present the findings, conclusions and recommendations for multiple audiences.

5. All involved – national team members, coordinator, and the people described in Point 4 – will need explicit Terms of Reference that clearly reflect a HRBA and gender mainstreaming knowledge, skills and application.

2. Preparatory arrangements and sources of information

When planning the review, it is important to determine who should be involved and how. The MoH is envisaged to lead the review, but other stakeholders such as the Ministry of Gender or Social Affairs, NHRI, health development partners and CSOs also offer important contributions to the review, dissemination of findings or catalysing of actions.

Capacity building of team members in the areas of human rights and gender equality may be needed before and during the review. Capacity building is an important strategy in both a HRBA and gender mainstreaming to make sure such skills are wide-spread and implemented.

The team should prepare a timeline for the review, ensure access to relevant documents, and identify people to interview. Ample time should be allotted for data collection, analysis, and report-writing. Additional time will be required for report/presentation preparation and sharing. It may be helpful to have a designated focal person in the MoH and other ministries – apart from those involved in the analysis – to facilitate procurement of relevant documents, as well as to facilitate appropriate permissions and appointments for interviews.

Sources of information will include documents, information available on the internet and interviews with key informants. The tables include space to note issues for follow-up during the document review or interviews.

2.1 Document review

The main method of data collection employed in this tool is document review. Key documents to review in addition to the Health Sector Strategy Plan include:

- human rights and gender equality instruments
- the national constitution and public health law
- the national development plan (or PRS)
• country reports of Special Procedures, UPR recommendations, Treaty Bodies’ recommendations, and reports of regional human rights mechanisms, if applicable
• national MDG reports and State reports to UN Treaty Bodies and the UPR

Other documents which may also be relevant:

**Overall**

• National health policy and health-care law
• Gender or women’s equality/development policy or strategy (note that some countries may have a women’s health or gender and health strategy)
• Human rights policy, strategy or action plan
• National hospital policy, laws or regulations
• Special reports relating to equitable access to health care, quality of care and clients’ perception of quality
• Demographic health survey (or other population-based survey findings)
• Periodic basic health statistic reports
• Reports related to human rights mechanisms and consensus documents
• Reports or analysis by key NGOs on health sector performance and women’s health

**Service delivery**

• Policies for key interventions or areas, for example child health, HIV/AIDS, sexual and reproductive health, mental health, and laws and regulations related to health services procurement and delivery

**Health workforce**

• Human resource policy or strategy (addressing either recruitment, training, mobility or retention) and health professional legislation and regulation (e.g. licencing)
• Code of conduct
• Occupational health and safety laws and regulations

**Health information**

• Guidelines for information systems, for example health management information system
• Guidelines on health indicators
• Policy or laws and regulations on data access and sharing

**Medical products, vaccines and technologies**

• Medicines policy or strategy (including essential medicines/health technology lists or guidelines), and laws and regulations on governing drugs (pharmaceutical regulations) and R&D
• Policy on access to medical products and technology, including stipulations on age of consent
Health financing

- Health financing policy or strategy and laws and regulations related to health insurance
- Policy on user fees or out-of-pocket expenditures

Leadership and governance

- Strategy or guidelines on community participation in health decision making or policies (e.g., consultations on survey development, service design and plans, etc.)
- Policy on public-private partnerships and development partnerships (i.e. foreign aid)
- Health sector performance report(s)
- All health-related laws/policies in above categories
- National studies that address health inequities, including studies by CSOs

It is advisable to have access to an electronic version of this tool to facilitate an easy compilation of findings; the accompanying CD-Rom is for this purpose. It is also desirable to get the documents that need to be reviewed in electronic format, preferably one that allows for cutting and pasting of sentences/phrases for inclusion of direct quotes in analysis tables. However, in many countries, laws and regulations may not be available in electronic format, which should be taken into account. Separate tables could be printed/copied for key informant interviews. When searching for information in the documents for review or identifying relevant background documents on the internet, the search words included in Box 8 may be helpful. Where electronic copies of documents are not available on the internet, government ministries or national bodies such as NHRIs may be contacted for access.

2.2 Interviews

Beyond content and development, process and implementation are key for review. Analysis tables 8 and 9 focus on the institutional framework and the process of assessment, analysis and strategic planning in relation to the national health sector strategy. Interviews may be required to provide additional information that the document review cannot. In addition, the team may have further questions after reviewing the required documents. It may also be helpful to discuss the findings with national experts in the different areas for a more thorough understanding of the findings.

Box 8

Suggested search words

- accountability
- boys
- convention
- covenant
- empowerment
- equality
- equity
- gender/gender equality/
gender equity/gender
sensitive/gender
mainstreaming
- gender awareness
- girls
- health differences

- marginalized/marginalization
- men
- non-discrimination
- participation
- poverty/pro-poor
- rights/rights-based
- transparency
- treaties
- vulnerable
- women/women’s health/
women’s rights
In order to properly plan for these interviews, a tentative list should be made at an early stage of:

- Key persons to meet and interview as well as agencies and institutions to visit for further information and clarification of issues unearthed by the review;
- Key meetings and consultations to be held with different groups of stakeholders, for example to discuss crucial issues or to debrief before finalizing findings and report preparations.

3. Information gathering and analysis

3.1 Preparing for document review

Part C of the tool is divided into 3 assessment levels, with a total of 15 analysis tables. The introduction to each analysis table provides brief background information, indicated by the following icon:

![BACKGROUND INFORMATION]

Possible sources of information are proposed after each analysis table indicated by the following icon:

![WHERE TO FIND THE INFORMATION]

When information is available on the internet, specific web sites are listed.

3.2 Process of data collection

Each analysis table is composed of analysis questions, a rationale for the area/questions and selected references to relevant instruments/documents.

Rationale provides a brief clarification as to why the question is important from a human-rights and gender-equality perspective. Rationales are included in Assessment levels 2 and 3.

A column with selected relevant instruments/documents is included in Assessment levels 2 and 3. This column provides a listing of documents that serve as the foundation for analysis questions. The listing of documents is not exhaustive, and only includes selected human rights and gender equality instruments addressed under Assessment level 1. There are other relevant documents and instruments (such as, for example, ILO conventions, WHA resolutions and technical guidelines, which have not been included). Moreover, regional human rights treaties developed in Africa, the Americas, Europe and the Arab region may be relevant sources for context-specific analysis questions.

Regional human rights treaties reflect particular human rights concerns of the regions and provide specific mechanisms for protection. If a State has ratified both international and regional human rights treaties, the State is legally bound by both. States are usually expected to report on their progress in implementing the treaties to regional institutions (commissions/committees/courts) responsible for monitoring compliance with these treaties. The reporting requirements vary between regions according to the treaty ratified (see pages 40-43 for information resources on regional human rights mechanisms).
3.3 Analysis

When conducting the analysis, users should remember that the progressive realization of the right to health and the achievement of gender equality is not a uni-directional linear process. In some contexts we may find that sectoral strategies promote elements of human rights and gender equality even when not incorporated in legislation nor expressed through ratification of human rights treaties. The promotion of human rights and gender equality requires joint efforts at different levels and areas of the State administration – with potential for synergies between different processes.

In other words, the absence of “top down” coherence from assessment level 1 to 2 to 3, does not necessarily constitute a lack of willingness to operationalize obligations and commitments on human rights and gender equality. Rather, exploring coherence in this analysis is a way of identifying entry points for strengthened actions (see Figure 1).

The analysis should note both weaknesses and strengths and focus on identifying entry points for action. It should be noted that findings are likely to be shown in ranges or degrees of achievement. The progressive realization of the right to health and the achievement of gender equality require that targeted steps are taken in the right direction. In other words, answers do not need to be “yes” for a State to realize its obligations and commitments. In most cases, a “yes” or “no” answer will not be easily given; rather, ranges or degrees of a “yes” or “no” are most likely to be found.

**ANALYSIS TIPS**

Analysis tips, indicated by the symbol above, are provided and include suggestions to:

- summarize analysis questions by theme;
- link analysis tables and assessment levels to explore policy coherence;
- compare findings with other sources of local information on gender equality, human rights and/or health;
- explore ways that the findings could be used to spark broader dialogue and activities on gender equality and human rights in the health sector (where applicable).

Based on the analysis, users can draw general conclusions – bearing in mind that the purpose of the assessment is not to “pass” or “fail” a health sector strategy. Use the ‘general conclusions’ to highlight key findings.

General conclusions are represented as follows:

**GENERAL CONCLUSIONS**
4. **Sharing the findings**

The findings of the review should be effectively shared with stakeholders in order to catalyse action.

4.1 **Presenting the conclusions and recommendations**

The findings may be shared in different ways, depending on the context in, and the purpose for which the tool is used. The findings may be shared in stakeholders’ meetings, through a report, community meetings or activities, media, etc.

If the tool is used in the context of a health-sector review, reporting will follow the format agreed upon with the MoH and development partners (as relevant). If the tool is used as a stand-alone study, there may be more flexibility on the reporting format. It may be useful to agree on a format for the reporting *before* the start of the assessment. For example, the findings could be grouped for presentation/dissemination as follows:

- Results of relevance to the MoH and health sector partners and actions.
- Results of relevance for intersectoral partners and actions on human rights, gender equality and health.

The findings, as incorporated in the analysis tables and reflected in the general conclusions, can help to identify recommendations on practical steps for the integration of a HRBA and gender mainstreaming in health sector actions and planning.

The analysis team may find it relevant to develop an action plan to implement the recommendations. Recommendations should ideally reflect the “what” and the “how” of a HRBA, gender mainstreaming and health, including “who” the responsible stakeholders are.

A practical way to present recommendations is to divide them into short-term, medium-term and long-term actions, matched to specific activities and responsibilities of different partners. The table below provides an example of how such information could be structured. It is important to make time for discussions on the findings, and also to gain insight concerning the gaps identified as well as the feasibility of taking forward proposed recommendations. Findings and recommendations relating to intersectoral action should be discussed with relevant sectors and partners before disseminating.

4.2 Dissemination

The findings should be disseminated strategically and be made available to all stakeholders involved in the development and implementation of the health strategy. Time should, therefore, be allocated for this exercise. The format for the dissemination of findings will depend on the country context and specific target audiences (e.g. policy makers, health managers, CSOs, development partners, general public etc.). The following dissemination opportunities or target audiences may be considered:

I. Strategic health sector meetings, national health assemblies and joint review missions.
   • Inform key health stakeholders such as CSOs, health professional associations, development agencies and bilateral organizations about the findings, in order to facilitate follow-up actions.

II. Policy fora in relevant sectors.
    • Meetings with ministries of health, gender or women’s affairs, national human rights commission (or the equivalent), and other relevant sectors, preferably together, with the objective of stimulating dialogue and effective action.
    • Community meetings, village health council/committee meetings, etc.

III. General media for informing the general public.
    • Newsletters, posters, flyers, press releases or policy briefs may reach a broader audience and facilitate access by the public.
    • Lecture series/seminar presentation to health systems researchers, policy makers, students, etc.

IV. Strategic development cooperation meetings, mechanisms and procedures such as UNDAF and UNCT meetings/activities on gender, human rights or health.
    • Inform UN special procedures, UPR of the HRC, and UN treaty bodies, if applicable and as appropriate.

4.3 Catalyse action

The findings are expected to catalyse action and provide inputs into policy and reporting processes to:

• Contribute to the development of subsequent gender-responsive health sector strategies grounded in a HRBA and provide input into health planning, involving all stakeholders.

• Enhance the ability of marginalized groups to participate actively and meaningfully in the policy process.

• Strengthen mechanisms for dialogue among multisectoral partners on how to enhance attention to human rights and gender equality in health sector planning.

• Develop or revise monitoring (such as indicators) of health sector strategies that will adequately capture human rights and gender equality outcomes.

• Strengthen capacity of decision-makers and staff in the health sector on human rights and gender equality.

• Promote collaboration between the health sector and other sectors – such as justice,
women’s development or gender education, employment and transportation – to discuss ways to enhance the design and implementation of the political and legal framework with respect to human rights, gender equality and health.

- Develop joint activities between various actors. For example, curricula revision for health professionals (pre- and in-service training), and filling information gaps on gender equality, human rights and health through enhanced research initiatives (academic and NGO-based).
- Develop advocacy strategies in promoting legal and policy reforms to support the progressive realization of the right to health.
- Provide input to human rights reporting and mechanisms, including State and “shadow reporting” to UN treaty bodies, special procedures mandate-holders of the Human Rights Council\(^3\) and reports to the Council’s UPR\(^4\).
- Provide inputs to national MDG reports, particularly how the health sector strategy (or other reviewed documents) support national achievements of MDG targets and goals.
- Provide input to ICPD and Beijing annual reports.
- Provide input to national human rights action plans and national monitoring efforts.

**Endnotes**

1. Examples of gender-related barriers include lower professional status (and hence opportunities to take part in assessment activities), restricted travel outside of the city of residence, childcare responsibilities (and therefore less time for dedication to extra-professional activities), allowances from employers for the use of staff time, burden of additional, uncompensated working hours, etc.

2. Such studies may be available from the national NGO coordination council. If such a study/evaluation is not available, it is recommended that a pre-study be carried out to identify the key organizations that could have essential information/team members to contribute to the study.

C. ANALYSIS TABLES

Assessment level 1: State obligations and commitments to human rights and gender equality

Assessment level 1 focuses on national obligations and commitments to human rights and gender equality as expressed in international treaties and agreements and includes analysis tables linked to international human rights treaties, key consensus documents, the UPR and UN special procedures. Information is provided on regional human rights treaties that users may want to adapt/modify in analysis table 1. Note that the information provided on regional treaty bodies is not exhaustive.

1.1 International human rights treaties

Analysis table 1 reviews whether the State has ratified key international human rights treaties and whether steps have been taken at the national level to report and implement recommendations in relation to the right to health and gender equality.

BACKGROUND INFORMATION

Analysis table 1 includes six human rights treaties which recognize the right to health. The analysis table also incorporates the International Covenant on Civil and Political Rights (ICCPR) and the Convention Against Torture (CAT) as violations of many of the rights contained in them would have direct implications on the enjoyment of the right to health.

The equal right of men and women to the enjoyment of all human rights is enshrined in all of these human rights treaties.

EXAMPLES OF TREATIES RECOGNIZING THE RIGHT TO HEALTH

International Covenant on Economic, Social and Cultural Rights (ICESCR)
Art. 3: The States Parties to the present Covenant undertake to ensure the equal right of men and women to the enjoyment of all economic, social and cultural rights set forth in the present Covenant.
Art. 12: 1. The States Parties to the present Covenant recognize the right of everyone to the enjoyment of the highest attainable standard of physical and mental health.

Convention on the Elimination of All Forms of Discrimination against Women (CEDAW)
Art. 12: 1. States Parties shall take all appropriate measures to eliminate discrimination against women in the field of health care in order to ensure, on a basis of equality of men and women, access to health-care services, including those related to family planning.

Convention on the Rights of the Child (CRC)
Art. 24: 1. States Parties recognize the right of the child to the enjoyment of the highest attainable standard of health and to facilities for the treatment of illness and rehabilitation of health. States Parties shall strive to ensure that no child is deprived of his or her right of access to such health-care services.
Some of the core international human rights treaties are supplemented by optional protocols addressing specific concerns. This tool does not provide guidance on analysing commitments expressed through ratification of these optional protocols.

When a State ratifies or accedes to a human rights treaty, it undertakes a legal obligation to implement the provisions in the treaty. If a State makes a reservation against a particular article in a human rights treaty, the State is not legally bound by the provisions in that article.

Human rights treaty bodies are committees of independent experts that monitor the implementation of the core international human rights treaties. Once a State ratifies a human rights treaty, it is required to submit periodic reports (usually every 4–5 years depending on the treaty) to the relevant treaty body on its implementation of the treaty.

The treaty body reviews the report in dialogue with government representatives and identifies concluding recommendations/observations. The recommendations from treaty bodies can be used to support development planning in different sectors, including health.

**EXAMPLE OF TREATY BODY RECOMMENDATION**

*General recommendations by the Committee on Elimination of Racial Discrimination (CERD) to the United States in 2008*

The Committee regrets that despite the efforts of the State party, wide racial disparities continue to exist in the field of sexual and reproductive health, particularly with regard to the high maternal and infant mortality rates among women and children belonging to racial, ethnic and national minorities, especially African Americans, the high incidence of unintended pregnancies and greater abortion rates affecting African American women, and the growing disparities in HIV infection rates for minority women (art. 5 (e) (iv)).

The Committee recommends that the State party continue its efforts to address persistent racial disparities in sexual and reproductive health, in particular by:

(i) Improving access to maternal health care, family planning, pre- and post-natal care and emergency obstetric services, inter alia, through the reduction of eligibility barriers for Medicaid coverage;

(ii) Facilitating access to adequate contraceptive and family planning methods;

(iii) Providing adequate sexual education aimed at the prevention of unintended pregnancies and sexually transmitted infections.

(United States, Distr. General CERD/C/USA/CO/6, 8 May 2008, para. 33)

WHERE TO FIND THE INFORMATION

OFFICE OF THE HIGH COMMISSIONER FOR HUMAN RIGHTS
Human Rights by Country

At this website, you can click on the country concerned and access information on ratifications, reservations and recommendations as well as country visits by special procedures.
http://www.ohchr.org/EN/Countries/Pages/HumanRightsintheWorld.aspx

- Information on the process and mechanisms linked to the preparation of periodic reports and the implementation of recommendations from treaty bodies may be found by contacting relevant authorities. Usually the ministry of foreign affairs takes a lead role. Others worth contacting are the national human rights commission (or ombudsperson), ministry of justice, MoH, ministry of gender, women’s affairs (or equivalent), the UNCT or human rights NGOs.
The Americas

The American States, in exercise of their sovereignty and within the framework of the Organization of American States (OAS), adopted a series of international instruments that have become the grounds for a regional system for the promotion and protection of human rights, known as the Inter-American Human Rights System (Inter-American System or IAHRS). This system acknowledges and defines these rights and establishes obligations tending to their promotion and protection and creates bodies destined to supervise their observance. The Inter-American System was formally initiated with the approval of the American Declaration of the Rights and Duties of Man in 1948, within the framework of the Charter of the Organization of American States. Additionally, the system has other instruments such as the American Convention on Human Rights; Protocols and Conventions on specialized matters, such as the Additional Protocol to the American Convention on Human Rights in the Area of Economic, Social and Cultural Rights (Protocol of San Salvador), the Convention to Prevent and Punish Torture, the Convention on Forced Disappearance of Persons, and the Convention on the Prevention, Punishment, and Eradication of Violence against Women, and the Inter-American Convention on the Elimination of All Forms of Discrimination Against Persons with Disabilities among others; as well as the Rules of Procedure and Statutes of its bodies.

The IAHRS is made up of two bodies: the Inter-American Commission on Human Rights, whose headquarters are located in Washington, D.C, United States of America, and the Inter-American Court of Human Rights, whose headquarters are in San José, Costa Rica.

- Information on the rules of procedure of IACHR are available on: http://www.cidh.oas.org.
- For information as to whether the State has ratified the human rights treaty or made any reservations, refer to the OAS web site: http://www.oas.org/DIL/treaties_and_agreements.htm.
- Annual reports of the IACHR to the General Assembly can be found at: http://www.cidh.oas.org/annual.eng.htm.
- Special reports regarding the situation in a specific State, and country reports (following on-site visits) of the IACHR are available on http://www.cidh.oas.org/pais.eng.htm.
  > Recommendations are found towards the end of the special reports and country reports.

Africa

States that have ratified the African Charter on Human and Peoples’ Rights are obliged to report every two years to the African Commission on Human and Peoples’ Rights (ACHPR) on the legislative and other measures taken to implement the charter.
If the State has also ratified the Protocol to the African Charter on the Rights of Women in Africa, then that State should also include information on measures taken to implement the Protocol in its report to the ACHPR.

States that have ratified the African Charter on the Rights and Welfare of the Child are required to report every three years to the Committee of Experts on the Rights and Welfare of the Child on the measures taken to implement the charter.

- For information as to whether the State has ratified the human rights treaty or made any reservations, refer to the web site of the African Union: http://www.africa-union.org/root/au/Documents/Treaties/treaties.htm.
- For information on submission of reports to the ACHPR, refer to their web site: http://www.achpr.org/english/_info/status_submission_en.html.

**The Arab region**

The revised Arab Charter on Human Rights was adopted in 2004, but only entered into force in 2008 when the Standing Committee on Human Rights at the Arab League became functional. State Parties are expected to report every three years to the Arab Committee of Experts on Human Rights. The Committee considers the reports in the presence and with the participation of representatives of the State concerned. The Committee shall submit an annual report, complete with its observations and recommendations, to the Standing Committee on Human Rights at the Arab League.

- For information as to whether the State has ratified the human rights treaty or made any reservations, refer to the web site of the Human Rights Index in the Arab Countries: http://www.arabhumanrights.org/en/countries/country.aspx?cid=1
- For information on States’ reports and corresponding recommendations: http://www.arabhumanrights.org/en/bodies/reports.aspx?ct=1&rt=25

**Europe**

The European Convention for the Protection of Human Rights and Fundamental Freedoms does not incorporate the right to health explicitly. However, violations of many of the civil and political rights contained in the treaty affect the enjoyment of the right to health. The European Social Charter guarantees social and economic human rights. It was adopted in 1961 and revised in 1996. The European Committee of Social Rights (ECSR) ensures that States Parties are in conformity in law and in practice with the provisions of the European Social Charter. Under the new reporting system (2007), the provisions of the Charter have been divided into four thematic groups. States are expected to present a report on part of the provisions annually and each provision of the Charter, including Art. 11 on the right to protection of health, will be reported on once every four years. The ECSR examines the reports. It decides whether or not the situations in the countries concerned are in conformity with the European Social Charter. The decisions are known as “conclusions”. In the conclusions, the ECSR notes positive developments and existing challenges.
• For information as to whether the State has ratified the human rights instruments listed below or made any reservations, refer to the following web sites of the Council of Europe:
  The European Convention for the Protection of Human Rights and Fundamental Freedoms:

**ANALYSIS TIPS AND NOTES FOR DRAWING GENERAL CONCLUSIONS: INTERNATIONAL HUMAN RIGHTS TREATIES**

若您分析表 1 是主要描述的国家义务。相关信息用于理解该表的发现包括:

- 在批准或加入之前，国家通常审查条约以确定其法律是否与条约条款一致，并考虑最合适的促进遵守的方法。
- 如果该国对涉及健康权和/or 性别平等权的条款做出了保留，查看保留文本以了解具体的关切。该国可以决定随时撤回保留。
- 常见于一个部门/实体（通常是外交部）负责准备条约机构报告，并与利益相关者协商。不同部门/实体可能分别负责不同的报告。协调部门/实体可能邀请其他政府实体和民间社会合作伙伴成为制定委员会的一部分或提供意见，通过利益相关者会议或书面提交。请注意和卫生部门参与者在这些过程中是否被咨询或参与。
Recommendations from treaty bodies (called "concluding recommendations" or "concluding observations") often address issues related to the right to health and/or gender equality. In its recommendations, the Committee usually notes/welcomes positive developments, expresses concerns about specific challenges and puts forward recommendations for further implementation. These are important to note if they are health-related.

Recommendations from the treaty body are shared formally with the Government and are also made available on the OHCHR web site. The Government may ensure dissemination of the recommendations to relevant stakeholders. Note if and how recommendations have been disseminated among health stakeholders.

The State can take action in different ways to follow up on treaty body recommendations. Effective dissemination of recommendations is one important element. The Government may also identify specific strategies to implement the recommendations in coordination with different parts of the State administration and other stakeholders. The implementation of previous recommendations from treaty bodies may be reviewed when preparing a new State party report.

**Analysis table 1 can be used as a quasi-benchmark for exploring coherence across assessment levels.** Users are recommended to keep a copy of this table and its findings handy when putting together the final report.
**GENERAL CONCLUSIONS: INTERNATIONAL HUMAN RIGHTS TREATIES**

- The State has ratified the following international human rights treaties which either recognize the right to health or are important for the equal enjoyment of the right to health:

- The MoH and/or other health stakeholders have provided input on the reports to treaty bodies on the implementation of the following treaties:

- The following examples of State actions to follow up on the health-related recommendations were identified, including dissemination to the MoH and/or other health stakeholders:

- The following gaps and entry points were noted:
1.2 Consensus documents

Analysis table 2 reviews key consensus documents for which it is reasonable to expect national action and monitoring.

**BACKGROUND INFORMATION**

Examples of consensus documents which play an important role in catalyzing state action for health are the ICPD Programme of Action, the Beijing Platform for Action of the FWCW and the MDGs. Other relevant commitments may be in relation to specific health challenges such as the UNGASS on HIV/AIDS.

Consensus documents, such as declarations, are not legally binding but demonstrate a commitment to fulfill their objectives. Often, plans or programmes of action with strategic activities are elaborated to accompany consensus documents. States are expected to monitor national implementation of these commitments. Actions may include the establishment of certain mechanisms, development of national plans of actions or national progress reports.

**EXCERPTS OF BOTSWANA COUNTRY STATEMENT TO THE FOURTH WORLD CONFERENCE ON WOMEN**

“At our last preparatory national conference for Beijing held in August 1995, Botswana adopted a general framework for the National Action Plan. The National Action Plan constitutes both the national programme of action for further advancement of women, and the national follow-up activities to this Conference. Our national package contains six critical areas in which poverty, education and violence against women have been accorded the highest priority. The other areas of highest concern to Botswana are health, political empowerment and the girl child”.

Statement delivered by the Minister of Labour and Home Affairs, the Honourable B.K. Temane 1995.

WHERE TO FIND THE INFORMATION

- Information on these instruments is available on the following web sites:
  - ICPD: http://www.iisd.ca/Cairo.html
  - UN Women: http://www.unwomen.org
  - FWCW: http://www.un.org/womenwatch/daw/beijing
  - UN General Assembly Special Session (UNGASS) on HIV/AIDS: http://www.un.org/ga/aids/coverage/

- National reports that measure progress towards the MDGs are available on the UNDP web site: http://www.undp.org/mdg/reports.shtml

- Information on actions taken at national level in response to the consensus documents may be found through contacting the ministry of gender and women affairs (or equivalent), the MoH, UN agencies or relevant CSOs.

- If access to internet is limited, documents such as ICPD and the Beijing Platform for Action can usually be found through ministries for women's affairs, gender equality or its equivalent. UN offices (in particular the WHO, UNFPA and/or UN Women should also have hard copies of these documents and the subsequent national plans and/or reports. For national MDG reports, users should consult the UNCT or national UNDP office. Bilateral partners are also a good source of documentation on international consensus documents.

ANALYSIS TIPS: INTERNATIONAL CONSENSUS DOCUMENTS

- In line with the expectation that States are to implement the declarations and commitments expressed in international consensus documents that they sign, users should use this table to summarize the actions taken and mechanisms established.

- This table is about presenting a quick snapshot of State activities; therefore, the analysis should focus on summarizing State commitments and follow-up (i.e. implementation of national plans of action). It is also important to note those exceptions or additions to international consensus documents that States may have made.

- In terms of policy coherence, findings on these consensus documents can be compared with analysis table 1 findings. Users can map ratification of treaties such as ICESCR, CRC, CEDAW, ICCPR, etc. to responses here. Note that "top down" coherence may not be apparent. For example, a country may have a national plan of action to implement the Beijing Platform for Action without ratification of CEDAW or ICCPR, despite the Platform's attention to violence against women, gender-based discrimination, women's political rights and participation. Such a finding could, for example, enable a dialogue towards ratification of CEDAW given the country's commitment to similar principles.
**GENERAL CONCLUSIONS: INTERNATIONAL CONSENSUS DOCUMENTS**

- The State has expressed its commitments to the principles and objectives of the following consensus documents (note exceptions and additions):

  > This is concordant/discordant with international human rights commitments and obligations revealed in analysis table 1 (provide details as necessary):

- The following examples of State monitoring efforts were identified (note any inputs by the MoH and/or other health stakeholders):

- The following gaps and entry points are noted:
1.3 Universal periodic review

Analysis table 3 analyses commitments on the right to health and gender equality in the UPR mechanism of the HRC.

**BACKGROUND INFORMATION**

The UPR is a review of the human rights records of all 192 Members States once every four years. The UPR is a state-driven process, under the auspices of the HRC, which provides the opportunity for each State to declare what actions they have taken to improve the human rights situations in their countries and to fulfil their human rights obligations. As one of the main features of the Council, the UPR is designed to ensure equal treatment for every country when their human rights situation is assessed.

The HRC, based in Geneva, consists of 47 Member States of the UN. The UN GA has mandated the HRC to undertake a "universal periodic review" of the fulfilment by each State of its human rights obligations and commitments. This review started in 2008 and, in a period of 5 years, all States will be reviewed.

The UPR is intended to assess the extent to which States respect their human rights commitments as set out in various human rights instruments. However, the State may decide to give more or less space to the right to health and gender equality in the report, which they are expected to prepare for the HRC. Also OHCHR prepares a compilation of UN information as well as a summary of stakeholders information, including information from CSOs, that has been submitted to OHCHR. The review is conducted in one working group, chaired by the President of the Council and composed of the 47 member States of the Council. An outcome report with recommendations is adopted by the Council. States themselves are responsible for the implementation of UPR recommendations, and upon their second review, are expected to explain progress made and remaining gaps. In the event of a non-complying country, the Council will decide whether or not further measures need to be taken.

**OBSERVATIONS AND RECOMMENDATIONS TO PANAMA FROM THE UPR, HRC IN 2010**

As an outcome of the UPR, some positive developments were noted, such as the provision of free antiretroviral treatment covering over 70 per cent of people affected by HIV/AIDS, and the elimination of HIV exams as a requirement for entry or residency in the country.

However, the uneven distribution of wealth was highlighted as a pressing problem - large numbers of people, particularly indigenous communities, still live in poverty, with poor education and health facilities as well as limited access to drinking water and sanitation, particularly in remote areas.

The recommendations included concrete actions to address the situation of vulnerable populations, in particular children, indigenous peoples, people of African descent, prisoners and people living in rural areas. These included reform of the health systems, in particular with regard to primary health to ensure access to basic services related to health and food. Finally, it was recommended that Panama sign and ratify the Optional Protocol to the ICESCR.

(A/HRC/16/6)

### Analysis table 3: Universal Periodic Review

<table>
<thead>
<tr>
<th>When has the State gone through the UPR?</th>
<th>Did the MoH provide inputs to the drafting of the UPR national report? What health information is reflected in the compilation report of UN information and the stakeholder report?</th>
<th>Did the HRC provide any recommendations relating to the right to health and/or gender equality?</th>
<th>Is the State taking action to follow up on the conclusions and/or recommendations of the HRC? How?</th>
</tr>
</thead>
</table>

**WHERE TO FIND THE INFORMATION**

- The schedule for the UPR is available on the OHCHR web site: [www.ohchr.org/EN/HRBodies/UPR/Pages/UPRMain.aspx](http://www.ohchr.org/EN/HRBodies/UPR/Pages/UPRMain.aspx)
- The UPR reports are available on the OHCHR web site: [www.ohchr.org/EN/HRBODIES/UPR/Pages/Documentation.aspx](http://www.ohchr.org/EN/HRBODIES/UPR/Pages/Documentation.aspx). The reports include information on which ministry/entity has been responsible for preparing the report.
- Recommendations of the HRC are available on the OHCHR web site: [www.ohchr.org/EN/HRBodies/UPR/Pages/Documentation.aspx](http://www.ohchr.org/EN/HRBodies/UPR/Pages/Documentation.aspx)
- Information on the process linked to the preparation of reports and follow-up to the recommendations may be found by contacting relevant authorities, including the ministry of foreign affairs, ministry of justice, NHRIs or the UNCT. While it may be the case that a ministry/government entity is responsible for coordinating the report, other government or CSO stakeholders may be invited to provide inputs, through, for example, participation in committees, stakeholder meetings or written submissions.
Coherence can be explored by comparing whether actions to address conclusions and/or recommendations of the HRC reflect follow-up action on treaty body recommendations (analysis table 1).

GENERAL CONCLUSIONS: UNIVERSAL PERIODIC REVIEW

- The following issues relating to health and gender equality were raised in the national UPR report:

- The HRC provided the following recommendations related to health and gender equality:

- The following examples of State actions follow up on the recommendations of the HRC:

- The following gaps and entry points were identified:

- Coherence between the UPR process and reporting and follow-up on recommendations on international (and regional) human rights treaties are noted in the following ways:
1.4 Special procedures

Analysis table 4 analyses special procedures relevant to the right to health and/or gender equality during country missions.

**BACKGROUND INFORMATION**

UN special procedures are mechanisms established by the HRC (or its predecessor, Commission on Human Rights) to address either specific country situations or thematic issues. Special procedures are either an individual (called Special Rapporteur, Special Representative of the Secretary-General or Independent Expert) or a working group usually composed of five members (one from each region). Currently, there are 29 thematic and 9 country mandates supported by OHCHR.

Special procedures carry out country visits as part of their mandate, and following the country mission they submit a report, which includes recommendations. Several special procedures may raise issues relevant to the right to health and/or gender equality. The SR on the right of everyone to the enjoyment of the highest attainable standard of physical and mental health ("right to health") and the SR on violence against women and its causes and consequences are particularly relevant. Others may include the SR on toxic waste, extreme poverty, indigenous peoples and migrants.

Regional special procedures may also play an important role in advancing the right to health and gender equality. For those regions where special procedures are in place, users are encouraged to include these when relevant.

**RECOMMENDATIONS BY THE SPECIAL RAPPORTEUR ON THE RIGHT TO HEALTH FOLLOWING COUNTRY MISSIONS:**

**Mission to Romania, para 80, E/CN.4/2005/51/Add.4**

The Special Rapporteur recommends that the Government extend the participation of Roma, including Roma women and children, in the development, implementation and monitoring of health policies and programmes affecting them. He encourages the Government to extend the Roma community health mediator scheme, and to develop schemes to encourage Roma to train and qualify as health professionals.

**Mission to Peru, E/CN.4/2005/51/Add.3**

The decrease in budgetary allocations to the health sector, in particular in light of Peru’s continuing poor health indicators, is inconsistent with the State’s international right to health obligations. The Special Rapporteur strongly recommends that this decline in expenditure be reversed and that greater financial resources allocated to the health sector, in line with the commitment made in the Acuerdo Nacional, as well as Peru’s international human rights obligations, and that these resources be utilized on the basis of the pro-poor equity-based health policy signalled in the preceding paragraphs.

### Analysis table 4: Country visits of special procedures

<table>
<thead>
<tr>
<th>Title/Mandate of Special Procedure</th>
<th>Did the special procedure make any health and/or gender equality related recommendations in his/her mission report?</th>
<th>Have the health-related recommendations of the report been disseminated to the MoH and/or other health stakeholders?</th>
<th>Is the State taking action to follow up on the recommendations by the special procedure? How?</th>
</tr>
</thead>
<tbody>

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
WHERE TO FIND THE INFORMATION

- For a list of all special procedures and reports on thematic issues, please refer to the OHCHR website: http://www2.ohchr.org/english/bodies/chr/special/.
- For information on whether any special procedures have provided health-related recommendations to the Government, please refer to the OHCHR database (http://www.universalhumanrightsindex.org). On this site, you will find the following search annotations:
  > "Countries": select the name of your country.
  > "Rights": select the "right to health" and "elimination of discrimination against women", or any other relevant search annotations, such as for example, "non-discrimination", "right to social security" or "indigenous people".
  > "Bodies": select the relevant special procedure, for example "SR health" or "SR violence against women".
- Information on the process linked to dissemination of the mission report and follow-up to the recommendations may be found by contacting relevant authorities, including the ministry of foreign affairs, ministry of justice, NHRIs or the UNCT.

ANALYSIS TIPS AND NOTES FOR DRAWING GENERAL CONCLUSIONS: COUNTRY VISITS OF SPECIAL PROCEDURES

- Since country missions usually focus on a specific topic, the recommendations by the special procedure are likely to be targeted and not as broad in scope as treaty body recommendations. In other words, there may be a different focus from treaty body recommendations.
- Coherence can be explored by comparing whether actions to address conclusions and/or recommendations of the special procedures reflect follow-up action on treaty body recommendations (analysis table 1).
GENERAL CONCLUSIONS: COUNTRY VISITS OF SPECIAL PROCEDURES

• The following country-specific recommendations related to health and/or gender equality have been made by special procedures:

• The following examples were identified of how health-related recommendations have been disseminated to the MoH and/or other health stakeholders:

• The following actions have been taken on these recommendations:
C. ANALYSIS TABLES
Assessment level 2: Legal, policy and institutional framework for human rights and gender equality

Assessment level 2 focuses on human rights and gender equality in national legal, policy and institutional framework. Assessment level 2 includes analysis tables addressing elements of the constitution and other legislation; national development plans (poverty reduction strategies), including the budget framework; and relevant institutions.

2.1 The constitution

Analysis table 5 includes guiding questions in relation to the national constitution.

**BACKGROUND INFORMATION**

Most States have a written national constitution which sets out the rules for how society shall be governed. This also sets up the framework from which all sectoral policies are developed. Civil, cultural, economic, social and political rights are often enshrined in constitutions. Most constitutions provide specific entitlements in relation to the right to health and the right to equality.

**EXAMPLE FROM A CONSTITUTION: SOUTH AFRICA**

Elements of the right to health in the Constitution of South Africa (1996):

Chapter II, Section 27: Health care, food, water and social security:

"(1) Everyone has the right to have access to
   a. health-care services, including reproductive health care;
   b. sufficient food and water; […]

(2) The State must take reasonable legislative and other measures, within its available resources, to achieve the progressive realization of each of these rights.

(3) No one may be refused emergency medical treatment."
### Analysis table 5: The constitution

</tbody>
</table>
### Analysis questions

<table>
<thead>
<tr>
<th></th>
<th>Findings</th>
<th>Rationale</th>
<th>Selected relevant documents</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>Are provisions for the right to equality and freedom from discrimination included? On which grounds is discrimination prohibited (including for example grounds of race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth, physical or mental disability, health status (including HIV/AIDS), sexual orientation and civil, political, social or other status, which has the intention or effect of nullifying or impairing the equal enjoyment or exercise of the right to health)?</td>
<td>Non-discrimination is both a right and a principle. As a right, States have an obligation of non-discrimination, both &quot;de jure&quot; and &quot;de facto&quot;. The principle of non-discrimination is fundamental to promoting human rights, gender equality and health equity.</td>
<td>CESCR General Comments 16, 20; CESCR General Comment 14, paras. 18, 19; HRC General Comments 18, 28; Beijing Platform for Action, paras. 92–105; MDG 3; ICPD Chap. 4</td>
</tr>
<tr>
<td>4</td>
<td>Are provisions for the right to participation included?</td>
<td>Participation is both a right and a principle. As a right, every individual has the right to participate in public affairs. Participation should be free, active and meaningful. Participation is also a critical principle for empowering women and men from different groups to be included in the social, political and economic organization of communities and States. Equal and meaningful participation of women and men is a means of ensuring that State policies and processes reflect the actual needs and realities of women and men. Participation also serves as an accountability mechanism.</td>
<td>CESCR General Comment 14, para. 17, 54; CESCR General Comment 16; CEDAW General Recommendation 23; HRC General Comment 25; ICPD Chap. 4; ICPD 12.19; Declaration on the Right to Development Art.2</td>
</tr>
<tr>
<td>5</td>
<td>Are provisions on freedom of association included?</td>
<td>Freedom of association includes the right to form and join trade unions. Trade unions and interest groups provide people with leverage when negotiating with larger and more powerful institutions.</td>
<td>ICCPR, Art. 22; HRC General Comment 25, para. 8; Beijing Platform for Action, para. 166(i); ICPD Chap. 4</td>
</tr>
</tbody>
</table>

### Issues for follow up via either interview, additional document review or otherwise
WHERE TO FIND THE INFORMATION

- University of Richmond database of constitutions and other related documents: http://confinder.richmond.edu.
- The WHO Health and Human Rights Law Database (draft) on national constitutions (upcoming): http://who.int/hhr
- For those with limited internet access, consult colleagues working in the ministry of justice for access to hard copies of the constitution.

ANALYSIS TIPS AND NOTES FOR DRAWING GENERAL CONCLUSIONS: THE CONSTITUTION

- Summarize Questions 1–2 to outline references to the right to health in the constitution.
- Summarize Questions 3–5 to describe how selected human rights principles and standards are reflected in the constitution.
- Remember that if the constitution does not make reference to the right to health or gender equality, it does not mean that other national legal and policy documents also fail to make reference to them.
- Some constitutions may pre-date international human rights instruments and therefore users may find limited coherence with analysis table 1 if exact phrases are sought. The constitution should, however, ideally reflect in some way international obligations and commitments to gender equality and human rights. Note that even if States have not ratified all relevant human rights treaties or signed international consensus documents (analysis table 2), the constitution may still incorporate human rights and gender equality provisions.
GENERAL CONCLUSIONS: THE CONSTITUTION

- The constitution is coherent with State obligations and commitments to gender equality and the right to health in the following ways:

- The following gaps are noted:
2.2 Legislation

Analysis table 6 supports an analysis of a national public health law and/or other specific legislation relating to gender equality and health.

BACKGROUND INFORMATION

National public health laws generally set out the powers needed for governments to deliver essential public health functions. These functions include (among others) surveillance, screening, notification; and laws relating to sanitation, safe water, food safety and the safety of consumer products. Specific legislation may exist to address specific public health issues such as tobacco use or to regulate the private sector to overcome inconsistency with public health goals or to ensure that human rights are protected.

Gender-based discrimination may be upheld in legislation and can serve to restrict women’s ability (and marginalized groups of men) to claim rights to education, inheritance and voting – all of which are also underlying determinants of health. In order to determine to what extent legislation may or may not do so, it is necessary to examine how such restrictions differentially affect the health of women and men.

Analysis table 6: Legislation

<tr>
<td>2. Is there legislation which specifies the following:</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>a. Minimum age for marriage?</td>
<td>Legislation should specify a minimum age for marriage and make the registration of marriages in an official registry compulsory. Marriage should only be entered into with the free and full consent of both parties. The minimum age for marriage should be equal for men and women and protect against child marriage, especially among young girls. The lack of legislation stipulating a minimum age of marriage is widely recognized as linked to the health of young girls, e.g. early and multiple pregnancies, premature sexual debut and an increased exposure to sexually transmitted infections for young girls.</td>
<td>CEDAW Art. 16; ICCPR Art. 23; CRC Art. 24(3); CEDAW General Recommendation 21; CESC General Comment 16, para. 27; Beijing Platform for Action, para. 268; ICPD 4.21</td>
<td></td>
</tr>
<tr>
<td>b. Minimum age of consent for sexual intercourse?</td>
<td>While there are no international laws or guidelines on the age of consent, children and adolescents have the right to be protected from all forms of sexual abuse and exploitation.</td>
<td>CRC Art. 24(3), 36</td>
<td></td>
</tr>
<tr>
<td>c. Prevention of GBV (including marital rape)?</td>
<td>GBV includes acts that inflict physical, mental or sexual harm or suffering, threats of such acts, coercion and other deprivations of liberty. Gender-based (including interpersonal, domestic and sexual) violence is associated with a range of physical and psychological health consequences, such as injuries, sexually transmitted infections including HIV/AIDS, unwanted pregnancy, depression and a range of other mental health disorders. Laws against sexual and GBV should give full protection to all women, and respect their integrity and dignity. Appropriate protective and support services should be provided for victims.</td>
<td>CEDAW General Recommendation 19; Beijing Platform for Action, Violence against Women chapter; ICPD Chap. 4</td>
<td></td>
</tr>
<tr>
<td>Analysis questions</td>

<td>Rationale</td>
<td>Selected relevant document</td>
</tr>
<tr>
<td>--------------------</td>
<td>----------</td>
<td>-----------</td>
<td>---------------------------</td>
</tr>
<tr>
<td>d. Equal rights for men and women to own and inherit property?</td>
<td></td>
<td>The right to own and inherit land has long been an essential means of investing in the economic welfare of the family. Gender-based discrimination regarding land ownership often works against women, keeping them at a constant economic disadvantage. Poverty is widely recognized as a predictor of ill health, and when compounded by gender inequality the effects can be worse.</td>
<td>CEDAW General Recommendation 21, para. 25-35; HRC General Comments 18, 28; Beijing Platform for Action, para. 165(e); MDG 3; ICPD 4.6</td>
</tr>
<tr>
<td>e. Equality between women and men in access to employment and working conditions?</td>
<td></td>
<td>Both women and men have a right to work, to safe, just and favourable conditions of work and to protection against unemployment. Legislation must uphold equality in relation to employment.</td>
<td>ICESCR Art. 6 and 7; CEDAW, Art. 11, CEDAW General Recommendation 19, paras. 17, 18; CESC General Comment 16, paras. 21, 25; CESC General Comment 14, para. 15; HRC General Comments 18, 28; UDHR, Art. 23; Beijing Platform for Action, paras. 158, 165(b), 178(b); MDG 3; ICPD Chap. 4</td>
</tr>
<tr>
<td>f. Equal right of girls and boys to free, primary education?</td>
<td></td>
<td>Primary education should be compulsory and available free to all. Many girls, however, are denied their right to education, which has been demonstrated to have significant impact on fertility rates, birth spacing, health literacy and health seeking behaviours.</td>
<td>ICESCR Art. 13; CRC Art. 28; CEDAW Art. 10, 14(2)d; HRC General Comments 18, 28; CESC General Comment 13, paras. 5, 24, 55; CEDAW General Recommendation 19, para. 15; Beijing Platform for Action, paras. 27, 69–88; MDG 2; MDG 3 Target 3.1</td>
</tr>
</tbody>
</table>

**Issues for follow up via either interview, additional document review or otherwise**
WHERE TO FIND THE INFORMATION

- **NATLEX** is an ILO database of national labour, social security and related human rights legislation. Refer to the web site for information on relevant legislation. Click on the country of interest and then click on “Basic laws” (http://www.ilo.org/dyn/natlex/country_profiles.byCountry?p_lang=en).

- The **IDHL** includes national health legislation, searchable by country and health topic: http://apps.who.int/idhl-rils/index.cfm

- The **GLIN** is a public database of official texts of laws, regulations, judicial decisions, and other complementary legal sources contributed by governmental agencies and international organizations (http://www.glin.gov/search.action).

- The ministry of justice or the ministry of women’s affairs (or equivalent) may be consulted for information on relevant legislation.

ANALYSIS TIPS AND NOTES FOR DRAWING GENERAL CONCLUSIONS: LEGISLATION

- **Summarize Question 1** for ways that the public health law or other legislation addresses the right to health and gender equality.

- **Summarize Question 2** for an idea of how legislation deals with important markers of gender equality that, if unaddressed, can lead to negative impacts on the health of women and girls.

- National legal documents often include provisions on the right to health and gender equality that are absent from the State constitution. Compare findings here with analysis table 5 to explore issues of coherence.

- Provisions in public health laws should be in accordance with international human rights law. This means that provisions should oblige governments and other duty-bearers to respect, protect and fulfil the right to health. Users should confirm such instances of coherence with respect to the reviewed legislation in analysis table 6.

- Note that in many countries, gender-based discrimination is not just the result of gender bias in statutory law; it is also the consequence of discriminatory customary laws, traditions, social norms and attitudes. This means that legislation may reinforce existing inequalities, harmful beliefs or practices about women and men. For example, some countries have legislation that stipulates rape as a crime within the context of marital relations, while other rape laws are not explicit that forced sexual relations are criminal regardless of the relationship between the parties involved. Such legislation may be based on social norms and attitudes around heterosexual marriage where, in some contexts, male authority in all matters is accepted without question. Users can compare ways that women and men are treated and/or represented in national documents such as the constitution (analysis table 5) and legislation (analysis table 6) to engage in broader dialogue on ways that gender norms or inequalities are upheld in national legislation and policies – so as to reduce the harm that may result.
Identify potential areas for collaboration with other sectors related to determinants of health (law and justice in particular). While legislative reform may not be the objective of the exercise, identifying entry points to raise health issues with other sectors is important. Note potential areas for comparison with assessment level 3 on ways that issues, such as non-discrimination, are addressed within health sector documents. Users may choose to contextualize some of these findings with other local data or experiences as a means of contributing to multi-sectoral dialogue and broader awareness-raising on gender equality and the right to health. For example, if there is no minimum age of marriage established in national legislation, users may identify local information on early (or child) marriage and its health consequences as a means to advocate for such legislative change, protective health policies in line with CRC obligations, or stronger evidence on the health risks that early marriage poses for girls and boys.

GENERAL CONCLUSIONS: LEGISLATION

- The public health law or other legislation (which) supports the realization of the right to health in the following ways:

- The legislation promotes gender equality in the following ways:

- The following gaps were identified:
2.3 National development plans (and/or poverty reduction strategies)

Analysis table 7 supports an analysis of the national development plan (and/or PRS), including the national budget and expenditure framework.

**BACKGROUND INFORMATION**

A "national development plan" or "poverty reduction strategy" provides a cross-sectoral development framework. The government develops and implements a national development plan in collaboration with development partners and civil society. In some countries, PRS papers have provided the basis for development assistance and are increasingly seen as the national operational framework for development activities. A national development plan or PRS influences and guides sector-specific strategies, while various sectors including health, contribute to the development of the PRS.

The transition of health systems to reach universal access to quality health care requires a sustainable financial resource base. National ownership of health development policies and processes and effective use of maximum available resources are essential. Implementation of fair and sustainable health financing reforms, strategies and action plans should be based on the principles of accountability, transparency, non-discrimination and stakeholder participation.

---

**NATIONAL STRATEGIC DEVELOPMENT PLAN, CAMBODIA 2006–2010**

3.03 The leaders of the world meeting at the United Nations in 2000 agreed upon a Millennium Declaration. The Declaration is a commitment to human rights, democracy, peace and security and good governance, to create and sustain an enabling environment to achieve poverty reduction. Cambodia fully endorsed the Declaration and signed it because it is fully consistent with the long-term commitment of the Government to improve living standards and reduce poverty, as also with the spirit of SEDP [Socio-Economic Development Plan] I & II (para 3.03, p.27).

4.98 Very critical to poverty reduction are speedy removal of latent and overt barriers inherent in gender disparities such as unequal access to education, paid employment, land ownership, their [women’s] reproductive health care, vulnerability to HIV/AIDS and trafficking, and the generally disadvantaged position in both family and society while at the same time bearing a heavy share in raising a family (para 4.98, p. 64).

### National budget and expenditure framework

<table>
<thead>
<tr>
<th>Findings</th>
<th>Rationale</th>
<th>Selected relevant documents</th>
</tr>
</thead>
<tbody>
<tr>
<td>7. What is the total public expenditure on health as a percentage of GDP?</td>
<td>According to the principle of the progressive realization of the right to health in light of maximum available resources, the percentage of resources allocated to the health sector provides an indication of the commitment to realize the right to health. However, activities in related sectors also have an impact on the health of the population.</td>
<td>ICESCR Art. 2(1); CESC General Comment 14, paras. 33, 36; CESC General Comment 3, para. 7; Report of Special Rapporteur on the Right to Health (A/HRC/7/11), para. 96; Beijing Platform for Action, paras. 58(d), 346; ICPD Chap. 13</td>
</tr>
<tr>
<td>8. Utilizing the percentage or share of executed budget, what is:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>a. The trend of budget allocation to the health sector in the last 5 years?</td>
<td>Given the differences in available State resources, sometimes a trend is more helpful in the assessment of a country’s commitment to the right to health. An upward trend in budgetary allocations towards health sector growth in real terms, which means that nominal increases in allocation have to be adjusted for inflation, shows a concrete commitment to ensuring the right to health.</td>
<td>ICESCR Art. 2(1); CESC General Comment 14, paras. 33, 36; CESC General Comment 3, para. 7; Report of Special Rapporteur on the Right to Health (A/HRC/7/11), para. 96; Beijing Platform for Action, paras. 58(d), 346; ICPD Chap. 13</td>
</tr>
<tr>
<td>b. The trend of budget allocation to sectors addressing underlying determinants of health (education, water/sanitation, etc.) in real rather than nominal terms?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Analysis questions</td>
<td>Findings</td>
<td>Rationale</td>
</tr>
<tr>
<td>----------------------------------------------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>9. Utilizing the percentage or share of executed budget, what is:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>a. The target for budget allocation to the health sector (general government expenditure on health as a percentage of total government expenditure)?</td>
<td></td>
<td>The executed budget to health and sectors addressing underlying determinants of health provides an indication of a State's commitment to use the maximum available resources for the right to health. Absolute figures per capita help determine whether there is adequate funding for health. Accountability mechanisms are equally important to ensure effective use of resources.</td>
</tr>
<tr>
<td>b. The per capita government expenditure on health (in international dollars)?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>c. The target for budget allocation to sectors addressing underlying determinants of health (education, water/sanitation, etc.)?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>d. The per capita government expenditure on sectors addressing underlying determinants of health (education, water/sanitation, etc.)?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>10. Is there a target for reducing the number of households with catastrophic expenditure?</td>
<td>Avoiding catastrophic expenditure is a measure of social protection. Services need to be affordable for all including disadvantaged groups. Out-of-pocket payments can cause households to incur catastrophic expenditures, which in turn can push them into poverty.</td>
<td>CESCGR General Comment 19</td>
</tr>
</tbody>
</table>

Issues for follow up via either interview, additional document review or otherwise
WHERE TO FIND THE INFORMATION

- Individual country pages provide updated expenditure information on health for 1995-2008 for 193 Member States of the WHO (2008 data are provisional estimates). This information can be found on the following web site: http://www.who.int/nha/country/en/index.html
- National development plans and poverty reduction strategies are normally available on the web site of the Government department charged with the task of monitoring internal affairs.
- Information on the national budget and expenditure framework may be found through contacting the focal point for health financing in the ministry of finance or in the MoH.

ANALYSIS TIPS AND NOTES FOR DRAWING GENERAL CONCLUSIONS: THE NATIONAL DEVELOPMENT PLAN

- **Summarize Questions 1 and 4** for a recap of ways that human rights and gender equality are reflected in the national development plan. Make sure to pay attention to how disparities between different groups and geographical areas are measured, addressed or reported.

- **These findings can be compared to findings from analysis tables 1–4 for exploring coherence** on State obligations and commitments to the right to health and gender equality at the international (assessment level 1) and national level (assessment level 2).

- **Summarize Questions 2–3** to establish explicit recognition of the right to health and gender equality (or recalled commitments). This can be compared to findings from analysis tables 1–4 and 5–6 to explore coherence with State obligations and commitments to the right to health and gender equality at the international level (assessment level 1), constitution and national legislation (assessment level 2). Note where coherence can be detected, or where there appears to be a disconnect between or within assessment levels.

- **Pay attention to how the differential needs and life changes of women and men are reflected within the text of the plan.**

- **Indicate if any specific population groups are mentioned (for example children, adolescents, older persons, persons with disabilities, persons living with HIV; ethnic minorities and indigenous peoples) in relation to health.**

- **Summarize findings from Question 5–6** for a description of technical elements on health included in the plan. **Note whether the plan places health as central to national development,** and whether it aims to address the health needs of marginalized groups and devotes attention to gender differences.

- **Summarize Questions 7–9** to determine the positioning of health in the broader national development agenda. Compare with findings on MDG in analysis table 2; as the MDG framework clearly posits health as a central element of sustainable development, **degrees of policy coherence may be found between MDG activities and commitments** and the allocation of resources to the health sector in the national development plan.

- **Difficulties in finding information on the national budget and expenditure framework may highlight transparency issues.**
GENERAL CONCLUSIONS: THE NATIONAL DEVELOPMENT PLAN

- The national development plan positions health as central to development by:

- The Government’s commitment to identifying and addressing the effects of underlying determinants of health is demonstrated in the following ways:

- The Government’s commitment to realize the right to health progressively is demonstrated by its budgetary allocation for health in the following ways:

- Identified gaps:
2.4 Institutional framework for human rights and gender equality

Analysis table 8 assesses existing and relevant institutions and actors to understand how countries implement obligations and commitments in practice.

**BACKGROUND INFORMATION**

To ensure effective and sustainable human rights protection at the national level, it is crucial to have strong institutions that operate independently and adhere to international human rights standards. Important elements of a national protection system include independent human rights institutions or ombudspersons and a strong civil society, including a free and independent media. The Paris Principles (UN GA resolution 48/134) set out principles to govern NHRIs in relation to issues such as competence and responsibilities; composition and guarantees of independence and pluralism; and methods of operation; thus constituting the main relevant reference for this section. Beyond this, however, the section below does not include a dedicated column with selected relevant documents.

**Analysis table 8: Institutional framework**

<th>Rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Are national mechanisms in place to support the systematic integration in sector policies and plans of:</td>
<td></td>
<td>National mechanisms are required for coordination and monitoring of progressive measures towards fulfilling obligations and commitments to human rights and gender equality. The absence of such mechanisms, while not making progress impossible, may be an indicator of lower capacity for sustainable actions.</td>
</tr>
<tr>
<td>a. Human rights?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>b. Gender mainstreaming?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. Does the State have an institution/body addressing human rights issues (e.g. a national human rights commission or ombudsperson)? If so, does the institution:</td>
<td></td>
<td>NHRIs are indispensable elements of national protection systems. NHRIs are generally vested with a broad mandate and global competence to protect all categories of human rights in accordance with the Paris Principles GA resolution 48/134. NHRIs are also strategic actors at the national level given their authority as public institutions and the powers they enjoy in protecting victims of human rights violations. Several NHRIs have the power to investigate; gather information and report on human rights violations; and periodically publish reports on their findings.</td>
</tr>
<tr>
<td>a. Have a mandate to address economic, social and cultural rights?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>b. Support activities aimed at integrating a HRBA in national development planning?</td>
<td></td>
<td></td>

<tr>
<td>d. Have a budget on right to health activities?</td>
<td></td>
<td>Such an institution can facilitate gender mainstreaming across sectors. Addressing women’s health requires the involvement of several government ministries and other partners.</td>
</tr>
<tr>
<td>e. Produce any monitoring reports on the right to health?</td>
<td></td>
<td>A mandate acts as a constant target towards which an institution progresses. It is important that this mandate touch upon issues of gender equality and women’s empowerment, so that the institution’s focus is on target. This ensures that the work of the institution moves more efficiently towards gender equality goals without costly detours.</td>
</tr>
<tr>
<td>f. Produce any monitoring reports on gender equality?</td>
<td></td>
<td>Without a budget, an institution is not likely to be able to deliver. A budget is necessary to hire workers with a particular set of skills and knowledge, and to implement strategies and projects, and as such, a budget is necessary to the effective implementation of the right to health.</td>
</tr>
<tr>
<td>g. Have linkages with the health sector? If so, in what areas and for what activities?</td>
<td></td>
<td>Ensuring the right to health is equally enjoyed by women and men requires that the institution works in coordination with the health sector to support gender analysis and gender mainstreaming.</td>
</tr>
<tr>
<td>3. Does the state have an institution/body addressing gender equality and women’s issues/rights? If so, does the institution:</td>
<td></td>
<td>State Parties have a central obligation to give effect to the rights incorporated in international treaties and report on their progress in doing so.</td>
</tr>
<tr>
<td>a. Have a mandate to monitor national progress towards gender equality and women’s empowerment?</td>
<td></td>
<td>Such mechanisms within the MoH will help ensure that human rights and gender equality are systematically integrated into the Ministry’s daily processes. They will also help facilitate coordination and collaboration with human rights and gender equality institutions and other partners working on related issues.</td>
</tr>
<tr>
<td>b. Have a budget on gender mainstreaming across line ministries? If so, what proportion goes to health?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>c. Have relations or linkages with the health sector? If so, in what areas or for what activities?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Is there a mechanism or process in place for national oversight of implementation of international treaties, including State Party reporting?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>5. Does the MoH have a focal point or coordination mechanisms on:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>a. Human rights?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>b. Gender?</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### Analysis questions

<table>
<thead>
<tr>
<th>Analysis questions</th>
<th>Findings</th>
<th>Rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td>6. Is there a parliamentary committee on:</td>
<td></td>
<td>Parliamentary committees play an important role in discussing and taking forward specific issues, to be addressed in legislation. A parliamentary committee would ensure that health/human rights/gender equality interests are being represented throughout the national legislation process.</td>
</tr>
<tr>
<td>a. Health?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>b. Human rights?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>c. Gender equality?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>7. Are there any fora or mechanisms aimed at promoting intersectoral action in the areas of health, human rights or gender equality?</td>
<td></td>
<td>The right to health encompasses underlying determinants of health that often fall outside of the health sector. Intersectoral action is key to improving people’s health.</td>
</tr>
<tr>
<td>8. Is the media considered an institutional partner in national efforts on human rights and gender equality?</td>
<td></td>
<td>Media can play an important informative and mobilizing role and increase knowledge among the general population on the importance of human rights and gender equality. Press conferences, media campaigns, and standing invitations for the media at events are examples of mechanisms for engagement.</td>
</tr>
<tr>
<td>9. Are there any CSOs addressing:</td>
<td></td>
<td>CSOs are often active stakeholders and partners in health advocacy and implementation of health programmes. They can also play an important watchdog role, which is important from an accountability perspective.</td>
</tr>
<tr>
<td>a. Human rights in the area of health?</td>
<td></td>
<td>CSOs focusing on health may not always have an understanding of human rights and/or gender equality. Equally, CSOs focusing on human rights and/or gender equality may not necessarily give attention to the right to health. It is important CSOs strengthen their understanding and capacity on the linkages between health, human rights and gender equality.</td>
</tr>
<tr>
<td>b. Gender equality in the area of health?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>10. Are any CSOs addressing human rights and/or gender equality represented in health sector working groups and other fora?</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Issues for follow up via either interview, additional document review or otherwise**
WHERE TO FIND THE INFORMATION

- Interviews with informants will be necessary to find the information for this analysis table. Informants may be found in the MoH (planning and health promotion units), NHRI, ministry of gender and national coordination body for CSOs.

- The National Human Rights Institutions Forum is an international forum for researchers and practitioners in the field of NHRIs. It provides key global and regional documents, documentation on the work of global and regional fora, information on and from NHRIs, bibliography and research materials, and capacity building and training resources. http://www.nhri.net/. Additional information on NHRIs can be found on the OHCHR webpage: http://www.ohchr.org/EN/Countries/NHRI/Pages/NHRIMain.aspx

- The WHO database on Health and Human Rights Actors contains information gathered from a survey of organizations related to their structures and programs. It is searchable by country (where the organization is located) or by specific health issue: http://www.who.int/hhr/databases/en/

- The NGO Branch, Office for ECOSOC Support and Coordination, has developed a web portal devoted to non governmental organizations, and to members of UN agencies, funds and programmes, in order to share and promote best practices in the field of economic and social development, as well for the purpose of establishing collaborative development solutions and partnerships among these groups: http://esango.un.org/irene/index.html

ANALYSIS TIPS AND NOTES ON DRAWING GENERAL CONCLUSIONS: INSTITUTIONAL FRAMEWORK

- Summarize Questions 1 to 7 to describe national bodies or mechanisms in place to support progressive achievements in human rights and gender equality.

- Summarize Questions 8 to 10 for an indication of the measures that exist for civil society involvement in national actions towards human rights and gender equality.

- Note that the existence of institutional mechanisms can be compared with findings from analysis tables 1–4 (assessment level 1) and 5–8 (assessment level 2) to determine the degree of coherence with State obligations, commitments, policies and laws on human rights and gender equality. Analysis table 9 (assessment level 3) can be seen as one way of operationalizing such obligations and commitments. The absence of functioning mechanisms may not, therefore, demonstrate a lack of coherence – but may indicate a challenge to fulfilling obligations and commitments.

- The establishment of mechanisms and institutions/bodies is likely to be an important step in advancing human rights and gender equality. However, note that just because mechanisms/institutions/bodies are in place, it does not mean that they are necessarily independent or effective in practice. Based on the findings, note any areas or entry points for improvements.

- The analysis questions do not enable a comprehensive analysis of institutional mechanisms. Follow-up questions may be added for the purpose of the review.
GENERAL CONCLUSIONS: INSTITUTIONAL FRAMEWORK

• The following mechanisms are established to promote health as a human right and gender equality:

• There is commitment to human rights and/or gender equality between the MoH, national institutions and CSOs in the following ways:

• The following examples of media engagement on human rights and gender equality issues in relation to health were identified:

• Findings from this table are coherent/not coherent with State obligations and commitments because:

• The following gaps and entry points were identified:
Assessment level 3: Health sector strategy

A health sector strategy under government ownership and in collaboration with various stakeholders is an important means to strengthen a health system. The health sector strategy provides an overarching guiding framework and identifies medium-term priority actions to improve health outcomes. The health sector strategy is sometimes guided by a longer-term health policy.

Assessment level 3 analyses the extent to which a HRBA and gender mainstreaming methods have guided the health sector strategy development, and are reflected in the document itself.

Assessment level 3 is based on the health systems components used in the framework for action developed by WHO: Everybody’s business – strengthening health systems to improve health outcomes: WHO’s framework for action. This framework defines six building blocks that make up a health system, based on the functions defined in the World Health Report 2000. The building blocks are:

1. Leadership and governance (stewardship)
2. Service delivery
3. Health workforce
4. Information
5. Medical products, vaccines and technologies
6. Financing

The framework for action recognizes the importance of the values, principles and goals enshrined in the Alma-Ata Declaration and obligations and commitments on gender equality and human rights. Assessment level 3 provides guidance on how these obligations and commitments can be systematically assessed or addressed in relation to the building blocks.

A HRBA and gender mainstreaming require that human rights and gender equality are systematically incorporated in all stages of the development of the health sector strategy. This means that attention is required not only to the specific elements reflected and incorporated in the strategy itself but also to the different stages of developing, implementing and monitoring the strategy.
Analysis tables addressing the process of assessment, analysis and strategic planning, and key elements of the six building blocks are included to do this. The identification of questions has been guided by:

- States’ obligations to respect, protect and fulfil human rights
- Human rights treaties and reports by special procedures
- Elements of the right to health (AAAQ), as outlined in the CESCR General Comment 14 on the right to the highest attainable standard of health
- Key human rights principles (equality and non-discrimination; participation and inclusion; and accountability and transparency)
- Core gender equality consensus documents (e.g. Beijing Platform for Action)
- Health systems expertise

Issue-specific health policies also play an important role in guiding the response to various health challenges. However, Assessment level 3 will not reach the level of detail necessary for a comprehensive review of issue-specific policies, such as policies on mental health, or sexual and reproductive health. Nevertheless, analysis table 9 captures elements which are relevant to all policy documents and plans. Analysis tables 10–15 may also support a partial review of certain issue-specific policies. Issue-specific policies may also provide useful background information for the review of the health sector strategy. See the adjacent text box for additional examples of issue-specific health policies.
3.1 The process of assessment, analysis and strategic planning

Analysis table 9 reviews whether the strategy reflects key elements of a HRBA and gender mainstreaming in relation to the process of assessment, analysis and strategic planning. The issues captured in analysis table 9 are relevant to the strategy as a whole, but could also be used to analyse sub-sections of the plan in relation to the building blocks.

**BACKGROUND INFORMATION**

The realization of human rights, including gender equality, requires attention to both process and results. A human rights-based analysis aims to identify main development and human rights issues, and helps to understand the underlying and root causes of problems, identify specific actions and bring attention to issues at a legal, policy, budget or practice level. With respect to human rights and gender equality, the following elements of the assessment, analysis and strategic planning stages should be given emphasis:

✓ **The assessment (including information gathering)** aims to identify the main human rights and health challenges and the most affected groups. In order to detect inequalities, the assessment needs disaggregated data. This enables the identification of groups who have least access to health care and the underlying determinants of health. It will also benefit from including reports from national and international human rights mechanisms among the sources of information. The assessment responds to the question: *What is happening, where, and who is most affected?*

✓ **The analysis** seeks to identify the underlying and root causes of exclusion, discrimination and inequality. Underlying causes are often the consequence of policies, laws and availability of resources. Root/structural causes reveal conditions that require long-term interventions in order to change societal attitudes and behaviour at different levels, including those at the household, community and higher decision-making levels. The analysis also seeks to identify individual and institutional duty-bearers and their corresponding obligations and clarify the skills, abilities, resources, responsibilities, authority and motivation needed by those affected to claim their rights and those obliged to fulfil rights. It also identifies risks and power dimensions. In short, the analysis responds to the questions: *Why are these problems occurring? Who has the obligation to do something about it? What capacities are needed by those affected, and those with a duty, to take action?*

✓ **Building on the assessment and analysis, strategic planning** should outline how to build the capacity of duty-bearers and ensure that there is a focus on empowering rights-holders. Priority needs to be given to the most excluded and marginalized groups. Strategic planning responds to the question of where and how capacity development can produce the greatest results.
## Analysis table 9: Process of assessment, analysis and strategic planning

<table>
<thead>
<tr>
<th>Analysis questions</th>
<th>Findings</th>
<th>Rationale</th>
<th>Selected relevant documents</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Were the most vulnerable and marginalized groups and communities identified and systematically involved in preparing the strategy (e.g. women and men of indigenous communities; people living with HIV; ethnic, linguistic and religious minorities; low-income groups; rural populations)?</td>
<td>Participation and the empowerment of people who are marginalized and excluded is a development objective. The process of formulating the strategy should be based on the highest possible standard of active, free and meaningful participation. The identification of the most vulnerable and marginalized groups is facilitated by availability of adequate and disaggregated data on health status, etc. However, when data is not available efforts should be made to identify these groups (e.g. through focus group discussions and consultations with civil society).</td>
<td>CESCR general Comment 14, para. 54; Declaration on the Right to Development Art.2; Human rights and extreme poverty, Commission on Human Rights, (E/CN.4/1999/48), para. 109; Specific Groups and Individuals: Minorities: Report of the independent expert on minority issues (E/CN.4/2006/74), para. 65; Report of the Special Rapporteur on Violence against Women, its causes and consequences: Indicators on violence against women and State response (A/HRC/7/6), para. 45; Outcome document of the HLPM on the MDGs, paras. 36 and 68</td>
<td></td>
</tr>
<tr>
<td>2. Were a range of State and non-State actors identified and engaged in developing the strategy?</td>
<td>Participation by a broad range of actors helps ensure cross-sectoral and coordinated interventions which encompass both health care and underlying determinants of health. Participation of stakeholders with human rights and gender equality expertise will facilitate attention to these issues in the strategy development. Relevant actors may include government officials at all levels of administration, representatives of other state institutions and sectors, including parliamentarians, the judiciary, NHRIs, public and private service providers, development agencies and CSOs.</td>

<tbody>
<tr>
<td>3.</td>
<td>Were women and men equally engaged with equal decision-making responsibilities in developing the strategy (refers to both marginalized groups and communities, and State and non-State actors)?</td>
<td>Women and men have an equal right to participation in decisions relating to the right to health taken at both the community and national levels. Women often lack influence in decision-making, which has adverse impacts on their health. In addition, women face particular health issues which require attention in strategy development.</td>
<td>CESCR General Comment 14, para. 17; CESCR General Comment 16, para 20; Beijing Platform for Action; MDG 3; ICPD Chap. 4</td>
</tr>
<tr>
<td>4.</td>
<td>Was information made available to all stakeholders involved in the process (including on differences in access, underlying and root causes of health challenges)?</td>
<td>Participatory processes must be transparent, and require attention to providing information in forms that diverse groups can access.</td>
<td>Report of Special Rapporteur on the Right to Health (A/HRC/7/11), para. 81; (A/HRC/4/8) 7 Feb. 2007, para. 32</td>
</tr>
</tbody>
</table>

### Assessment

#### 5. In preparing for the development of the strategy were the following sources of information used to inform the assessment and analysis:

<p>| | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>Observations and recommendations of international human rights mechanisms (treaty bodies, special procedures and the UPR) and information provided by other international, regional and national human rights actors (NHRIs or ombudspersons)?</td>
<td>Observations, recommendations and other information provided by international, regional and national human rights actors can provide guidance on steps to be taken to progressively realize the right to health and gender equality. Recommendations/observations of international and regional human rights mechanisms advise on specific legislative, judicial, administrative and other measures needed to implement the provisions of human rights treaties.</td>
<td>CEDAW, Art. 18; CEDAW General Recommendation 22; CESCR General Comment 3, para. 10</td>
</tr>
<tr>
<td>b.</td>
<td>Information provided by persons from usually excluded, marginalized and discriminated groups according to sex, age, ethnicity, disability, geographical, social, political or any other conditions?</td>
<td>Information from excluded, marginalized and discriminated groups helps ensure that interventions are responsive to the situations of the people they are intended to benefit, and maximize ownership and sustainability.</td>
<td>CESCR General Comment 20; CESCR General Comment 14, para. 54</td>
</tr>
<tr>
<td>Analysis questions</td>
<td>Findings</td>
<td>Rationale</td>
<td>Selected relevant documents</td>
</tr>
<tr>
<td>----------------------------------------------------------------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>c. Quantitative and qualitative sources of information that allow for the identification of vulnerable groups?</td>
<td>The assessment aims at identifying the most disadvantaged groups. There may be great differences between national averages and the situation in certain communities or among certain groups. States are obliged to ensure equitable distribution of health facilities, goods and services. A combination of quantitative and qualitative sources of information help provide a comprehensive understanding of health challenges and who is affected. Data should be disaggregated to identify differences between men and women of different ages, groups and regions. Qualitative data may provide information on how men and women of different groups experience their situation in relation to key health problems.</td>
<td>CESCIR General Comment 14, para. 63; Report of the independent expert on human rights and international solidarity (A/HRC/4/8) 7 Feb. 2007, para. 32; The due diligence standard as a tool for the elimination of violence against women (E/CN.4/2006/61), para. 37; Report of Special Rapporteur on the Right to Health (A/HRC/7/11), para. 94</td>
<td></td>
</tr>
<tr>
<td>d. Civil society and/or community based organizations?</td>
<td>Information obtained from civil society often complements and/or serves as an alternative to State-based data sources. Community-based organizations that gather data on excluded, marginalized and discriminated groups help to ensure that all pertinent populations are included and addressed.</td>
<td>CESCIR General Comment 14, para. 12(b); Report of Special Rapporteur on the Right to Health (A/60/348), paras. 8-17, 80</td>
<td></td>
</tr>
<tr>
<td>6. Did the assessment identify the major health challenges and the most affected population groups?</td>
<td>The assessment should proportionately reflect the significance of various health challenges and the extent to which different groups are affected. Any resulting strategy based on the assessment must then prioritize according to the major challenges identified such that resources are used appropriately to bring about change in an optimal and efficient manner.</td>
<td>CESCIR General Comment 14, para. 12(b); Report of Special Rapporteur on the Right to Health (A/60/348)</td>
<td></td>
</tr>
</tbody>
</table>
## Analysis questions

<table>
<thead>
<tr>
<th>Analysis questions</th>
<th>Findings</th>
<th>Rationale</th>
<th>Selected relevant documents</th>
</tr>
</thead>
<tbody>
<tr>
<td>7. Did the analysis identify:</td>
<td></td>
<td>Laws and policies may maintain the inherent disadvantage that particular groups experience. For example, laws and policies may perpetuate inequalities between men and women because they do not take account of existing gender norms, roles and relations, particularly those experienced by women and that lead to gender inequality. Respecting human rights obliges States to repeal laws and rescind policies, administrative measures and programmes that have a negative impact on the health and well being of women and men of different groups.</td>
<td>CESCR General Comment 16, para.18; CESCR General Comment 14, paras. 9, 20; CEDAW General Recommendation 19, para. 11; Report of Special Rapporteur on the Right to Health (A/60/348); ICPD Chap. 8</td>
</tr>
<tr>
<td>a. Differences in physical and geographical access, affordability and quality of health services, Differences in access to the underlying determinants of health (water, sanitation, education, etc.), and Differences in opportunities and life chances for women and men of different groups?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>b. Societal attitudes and behaviour patterns (at the household, community and national/sub-national decision-making levels), including gender, cultural or linguistic barriers?</td>
<td></td>
<td>The obligation to protect human rights requires States to take steps to eliminate prejudice, customary and other practices that perpetuate inequalities and stereotyped roles for men and women. The State also has a responsibility to address barriers that may limit access for certain groups.</td>
<td>CESCR General Comment 20, paras. 1, 8(b); CESCR General Comment 16, para. 19; CEDAW General Recommendation 19, para. 11; Report of Special Rapporteur on the Right to Health (A/60/348); ICPD Chap. 4</td>
</tr>
<tr>
<td>8. Did the analysis identify State and non-State duty-bearers responsible for addressing key health challenges and their broader determinants at different national and sub-national levels?</td>
<td></td>
<td>It is essential to clarify obligations at different levels of the state administration in order to facilitate action and monitor results. Important categories of duty-bearers include policy-makers, managers/ coordinators, service deliverers and monitors/ inspectors.</td>
<td>CESCR General comment 14, para. 30-45 for State Duty-Bearers and from 63-65 for non State Duty-Bearers</td>

</table>

**Issues for follow up via either interview, additional document review or otherwise**
WHERE TO FIND THE INFORMATION

- For information on the process, information gathering, assessment and analysis, interviews with key informants are necessary. Key informants may be staff members of the planning and monitoring units in the MoH, the health systems focal point in the WHO country office and civil society representatives participating in health policy fora.

- The health sector strategy document is likely to provide some information on the process of developing the strategy, including information gathering, assessment and analysis. The analysis of the health situation should be outlined in the health sector strategy as the basis for prioritization. If this is not the case, clarifications can be sought from staff members in the planning unit in the MoH.

- For information on the strategic response refer to the health sector strategy document.

ANALYSIS TIPS AND NOTES ON DRAWING GENERAL CONCLUSIONS: PROCESS OF ASSESSMENT, ANALYSIS AND STRATEGIC PLANNING

- A good process to develop a strategy should include an analysis which looks at the immediate, underlying and root causes of exclusion, discrimination and inequality, role/pattern analysis and capacity-gap analysis.

- There will be a range of different findings for each of these questions. Analysis of such responses should not focus on a mere "yes" or "no" answer; rather users should focus on strengths and weaknesses, gaps and entry points. Note any suggested actions for improvement or issues for follow-up.

- Remember that the questions apply to the health sector strategy as a whole, but could also support the analysis of sub-sections relating to the building blocks.

- Summarize questions 1–4 to describe ways that the strategy development was inclusive, participatory and transparent.

- Note if specific groups were included or excluded, in what ways, and whether or not information was made available in limited or "full disclosure" manner, and to which groups in society. If, for example, information was only made available to planning units in the MoH, this may identify gaps in the process of engaging various health sector stakeholders (e.g. health professionals or researchers, those responsible for health information, etc.) – as well as those beyond the health sector. Such a gap could be used as a basis for increased sharing and collaboration in future health sector strategy planning.

- Summarize questions 5–6 to capture sources of information and methods applied in the assessment stage, with a particular emphasis on purposeful methods to highlight potential vulnerabilities of certain population groups.
Note how women and men are differentially, or similarly, represented when analysing the plans for attention to vulnerable groups. If there is no sex differentiation when discussing vulnerable groups, users may want to draw upon other sources of information on the ways that gender inequality can increase women’s (or men’s) health vulnerabilities in order to clearly identify gaps in information and methods used. If such information does not exist, users should note this absence. It should then be included as an area for further development among health stakeholders involved in generating evidence for policy use.

Summarize questions 7–9 to identify the types of methods used for developing the plan in the analysis stage. These questions can help to determine to what extent the plan is rooted in a holistic approach to health, attempting to identify underlying and root causes of health conditions and behaviours. Note whether gender inequality is listed as an underlying cause of ill health and in what ways. Users may want to use this as an entry point for discussing or building upon national actions to address gender inequality as a determinant of health with multiple stakeholders.

Summarize health sector capacities to fulfil the right to health and gender equality obligations and commitments with these questions, noting areas of focus and if specific stakeholders (either rights-holders or duty-bearers) are mentioned.

If, for example, only rights-holders are mentioned, users may want to raise this issue in multi-sectoral discussions on ways to strengthen State (and other duty-bearer) capacities to deliver on obligations and commitments listed in analysis tables 1–4 (international commitments).

Note if male and female rights-holders are mentioned in terms of capacity development. If no distinction is made, users may need to turn to other sources of information in order to determine the different types of capacities needed by different groups of men and women to enjoy the right to health and gender equality in the given context.

Summarize questions 10–13 to identify core elements of the strategic response from a HRBA perspective. Note where and how the response addresses issues raised in the assessment and analysis stages.

Coherence can be mapped by comparing findings from Assessment level 1 (analysis tables 1–4), in particular looking for obligations and commitments to ICESCR, CEDAW, Beijing and the MDG (see references for specific questions).

Coherence with Assessment level 2 can be explored by examining concordances/discordances with analysis table 7, in particular the questions on the health chapter of the national development plan. Users could further track how commitments to the right to health and gender equality (explicit or implied) in the constitution (analysis table 5) and legislation (analysis table 6) appear to be upheld in the development process of the health sector strategy.
GENERAL CONCLUSIONS: PROCESS OF ASSESSMENT, ANALYSIS AND STRATEGIC PLANNING

• Equal and informed participation of women and men of vulnerable and/or marginalized population groups, and State and non-State actors, was ensured in the following ways:

  The assessment identified marginalized groups of women and/or men through the following sources of information:

  The analysis identified the following underlying causes of health challenges and capacity gaps:

  The strategic response addresses capacity gaps, empowerment and priority to marginalized groups in the following ways:
3.2 Leadership and governance (stewardship)

**BACKGROUND INFORMATION**

The health systems building block on leadership and governance is about governmental roles in health as well as its relations with other sectors that impact upon health (also known as multi-sectoral relations). Leadership and governance, including stewardship functions, include several tasks, such as 4,6:

- design of the health system
- development, implementation and monitoring of strategic policy frameworks
- proper functioning of mechanisms such as oversight, coalition building, regulation and accountability
- definition of vision and direction of the overall health system
- adherence to governance principles such as the rule of law, effectiveness, efficiency and health equity

Reviewing whether leadership and governance is consistent with a HRBA and gender mainstreaming methods requires attention to both the strategy itself and the process surrounding the strategy in terms of how it is designed, implemented and monitored. This will include attention to:

- mechanisms for meaningful participation of male and female stakeholders in all of the above tasks, including CSOs such as patient advocacy groups, health professional associations and representative groups of marginalized populations;
- clearly defined and transparent roles and responsibilities for all actors in the health system;
- strategic legislative and policy frameworks – as well as other institutional mechanisms – based on human rights and gender equality principles to explicitly protect vulnerable groups in society;
- references to national obligations and commitments on human rights and gender equality when determining an overall vision for the health system in addition to developing laws and polices;
- health systems mechanisms (programmes, services, policies and laws) which reflect current socio-demographic trends (including changing gender norms, roles and relations); and
- oversight functions to ensure that discrimination against men or women from any social group are neither reinforced nor upheld but rather addressed through leadership and governance functions and tasks.
### Analysis table 10: Leadership and governance (stewardship)

<tbody>
<tr>
<td>1. Is the right to health and/or human rights explicitly reflected as a national priority and/or goal in the strategy?</td>
<td>Human rights are a first priority of States and health strategies should advance the realization of the right to health. Effective implementation of human rights – including the right to health – requires consistent attention to human rights in legislation, policies, strategies and plans.</td>
<td>Vienna Declaration and Programme of Action (A/CONF.157/23), para 1; Report of Special Rapporteur on the Right to Health (A/62/214); Outcome document of the HLPM on the MDGs, paras. 73-76; ICPD Chap. 13</td>
<td></td>
</tr>
<tr>
<td>2. Is achieving gender equality (including women’s empowerment) a national priority and/or goal in the strategy?</td>
<td>Men and women should enjoy the right to health on an equal basis. However, women are often disadvantaged.</td>
<td>CESCR General Comments 16; CEDAW General Recommendation 24, esp. para. 12; ICPD Chap. 4; MDG 3; Beijing Platform for Action; Outcome document of the HLPM on the MDGs, para. 72</td>
<td></td>
</tr>
<tr>
<td>3. Are legislative measures identified to achieve the right to health and gender equality?</td>
<td>Legal protections for women and men of different social groups are necessary to ensure the right to health and to promote gender equality.</td>
<td>CEDAW General Recommendation 24, para. 15; ICPD Chap. 4, 8; MDG 3; Beijing Platform for Action, paras. 89–111, 196–209, 286–344</td>
<td></td>
</tr>
<tr>
<td>4. Is there mention of any inter-sectoral mechanism in place?</td>
<td>The right to health encompasses underlying determinants of health. As many of the determinants of health are under the responsibility of other sectors (such as education, justice, employment, transport, water, sanitation, etc.), the MoH must engage with these sectors to promote health as a central element of social and economic development, as well as to ensure that each sector contributes to overall health goals. Similarly, other sectors should be aware that the right to health means that health is an obligation of the government as a whole.</td>
<td>Report of Special Rapporteur on the Right to Health (A/62/214), para. 22; ICPD Chap. 13, 15; Beijing Platform for Action, paras. 89–111, 196–209, 286–344</td>

## Analysis Questions

<table>
<thead>
<tr>
<th>Analysis questions</th>
<th>Findings</th>
<th>Rationale</th>
<th>Selected relevant documents</th>
</tr>
</thead>
<tbody>
<tr>
<td>6. Is the responsibility of Government in regulating the private sector recognized?</td>
<td>States have an obligation to protect the right to health. This requires States to take measures that prevent third parties from interfering with the right to health. For example, States must ensure that privatization does not constitute a threat to the AAAQ of services.</td>
<td></td>
<td>CESC R General Comment 14, para. 33; ICPD Chap. 13, 15; Beijing Platform for Action, paras. 89–111, 196–209, 286–344</td>
</tr>
<tr>
<td>7. Is there an explicit commitment to universal access to health services at:</td>
<td>An explicit commitment to universal access to health services supports rights holders in holding governments accountable for ensuring access to health services for women and men of different groups.</td>
<td></td>
<td>Declaration of Alma-Ata, paras. V–VIII; CESC R General Comment 14, para. 43; ICPD Chap. 8; Beijing Platform for Action, paras. 89–111, 196–209, 286–344</td>
</tr>
<tr>
<td>• Primary level?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>• Secondary level?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>• Tertiary level?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>8. Is decentralization addressed (or mentioned)? If so, are there mechanisms for communication, coordination, transparency and monitoring among different decision-making levels?</td>
<td>A decentralized system disperses governmental decision-making closer to people. This, in theory, allows greater participation and representation of local and community needs. Participation, in addition to being a human rights principle, is a critical strategy to ensure that a health system is responsive in the way that it is designed and implemented.</td>
<td></td>
<td>CESC R General Comment 14, para. 55</td>
</tr>
<tr>
<td>9. Is equal representation in senior management at different administrative levels promoted (of women and men of different ethnic/cultural, geographical or linguistic backgrounds)?</td>
<td>Decision-makers that are representative of the population enjoy greater legitimacy and often ensure that the rights, interests and needs of different groups are considered, thus contributing to equal and non-discriminatory services.</td>
<td></td>
<td>CEDAW General Recommendation 23, para. 45(c); CESC R General Comment 20; Beijing Platform for Action: Strategic Objective H; Beijing Platform for Action, paras. 181–195; MDG 3; ICPD Chap. 4</td>
</tr>
</tbody>
</table>

ASSESSMENT LEVEL 3
<table>
<thead>
<tr>
<th>Analysis questions</th>
<th>Findings</th>
<th>Rationale</th>
<th>Selected relevant documents</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>10. Is there a recognition of structures, mechanisms, or guidelines that address human rights and gender equality with respect to:</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>a. Research and data collection?</td>
<td>Such structures, mechanisms and guidelines ensure that inputs such as evidence for planning and service delivery reflect human rights and gender equality principles.</td>
<td>CESC General Comment 14, paras 57-58; CESC General Comment 16, paras. 3, 8, 11, 14; Report of the Special Rapporteur on violence against women, its causes and consequences (A/HRC/7/6), paras. 28, 45; CESC General Comment 20, paras. 19–26; ICPD Chap. 4; MDG 3; Beijing Platform for Action, paras. 89–111, 196–209, 286–344</td>
<td></td>
</tr>
<tr>
<td>b. Capacity building for the health work force, including health policy makers?</td>
<td>Building specific expertise in gender equality and human rights – and their connection with health – ensures that policies and services are respectful of, and promote, human rights and gender equality.</td>
<td>CESC General Comment 14, para. 12c; CEDAW General Recommendation 24, paras. 15(b), 31(f); ICPD Chap. 4; MDG 3; Beijing Platform for Action, paras. 89–111, 210–233</td>
<td></td>
</tr>
<tr>
<td><strong>Equality and non-discrimination</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>11. Are strategies outlined to address the specific health needs of vulnerable and/or marginalized groups?</td>
<td>Vulnerable and marginalized groups in societies bear an undue proportion of health problems. Overt or implicit discrimination violates fundamental human right principles and often lies at the root of poor health status. In practice, discrimination can manifest itself in inadequately targeted health programmes and restricted access to health services.</td>
<td>CESC General Comment 20; CEDAW, General Recommendation 24, para. 26, and General Recommendation 25, para. 12</td>
<td></td>
</tr>
<tr>
<td>12. Are gender norms, roles and relations or gender inequality acknowledged as a barrier to good health?</td>
<td>While there may not appear to be formal barriers to access health services, gender norms, roles and relations may lead to inequalities that affect access to services.</td>

### Analysis questions

17. Are data in the plan adequately disaggregated to reflect different population groups?

Findings: Disaggregation of data is necessary to move beyond national averages and identify differences between specific groups. Types of disaggregation include sex, age, ethnicity, disability, rural and urban.

Rationale: Data disaggregation is crucial to ensure that policies and programs are tailored to the specific needs of different groups.

Selected relevant documents:

18. Are there indicators measuring the following human rights and gender equality considerations:

   a. The availability, accessibility, acceptability and quality of health services, goods and facilities?

Findings: These are elements of the right to health.

Rationale: These indicators are essential for ensuring that the right to health is realized.

Selected relevant documents:
- CESCR General Comment 14, para. 12; CEDAW General Recommendation 9; Report of the Special Rapporteur on violence against women, its causes and consequences (A/HRC/7/6), paras. 26, 28, 30, 34; Beijing Platform for Action

   b. The existence of legal and institutional frameworks, as well as budgets, to progressively realize the right to health?

Findings: Structural indicators are important to reflect legal and policy commitments to the right to health.

Rationale: Legal and institutional frameworks provide the basis for realizing the right to health.

Selected relevant documents:
- CESCR General Comment 16, para. 39; CESCR General Comment 14, paras. 53, 57, 58; Report of the Special Rapporteur on violence against women, its causes and consequences (A/HRC/7/6), paras. 26, 28; Beijing Platform for Action

   c. Participation, non-discrimination, accountability, transparency and gender mainstreaming (e.g., sex parity, equal participation, etc.)?

Findings: Unless these elements are included in the monitoring process, they may be neglected in practice.

Rationale: Including these elements in monitoring processes is crucial for ensuring equal access to health services.

Selected relevant documents:
- CESCR General Comment 16, para. 39; Report of the Special Rapporteur on violence against women, its causes and consequences (A/HRC/7/6), paras. 26, 28; Beijing Platform for Action

19. Are reporting and mid-/end-term evaluation requirements outlined?

Findings: Reporting and evaluation requirements ensure that the relevant parties are regularly provided with accounts of performance levels. They also help address data gaps and help analysts and supervisors attain standards of performance efficiency.

Rationale: Reporting and evaluation are essential for monitoring progress and identifying areas for improvement.

Selected relevant documents:

20. Is the dissemination of the monitoring and evaluation data and reports considered?

Findings: A broad range of actors should preferably be involved in monitoring efforts and data, and reports should be widely available and accessible.

Rationale: Dissemination of monitoring and evaluation data is crucial for informing decision-making and ensuring accountability.

Selected relevant documents:
- Report of Special Rapporteur on the Right to Health (A/HRC/7/11), para. 96; Beijing Platform for Action

---

**Issues for follow up via either interview, additional document review or otherwise**
WHERE TO FIND THE INFORMATION

- This table addresses questions of leadership and governance as reflected in the health strategy document itself. The issues raised in the analysis tables are important human rights and gender equality issues and may therefore be addressed in the strategy. However, you may need to consult additional documents and staff members of the planning or monitoring units of the MoH for clarifications on activities and processes not explicitly addressed in the strategy.

- Many health sector strategies have a section on monitoring (sometimes a separate document), including indicators. Additional sources of information may include the planning and monitoring units in the MoH.

ANALYSIS TIPS AND NOTES FOR DRAWING GENERAL CONCLUSIONS: LEADERSHIP AND GOVERNANCE

There will be a range of different responses for each of these questions. Analysis of such responses should not focus on a mere “yes” or “no” answer; rather users should focus on ways that Ministries of Health can assume their stewardship role.

Use the points listed in the Background Information as an analytic framework when summarizing the table. To do so, users may need to re-group questions from the analysis table. For example, to address the right to health and gender equality, leadership and governance issues should address mechanisms for meaningful participation of relevant male and female stakeholders in all of the above tasks, including CSOs such as patient advocate groups, health professional associations and representative groups of marginalized populations.

As per leadership and governance functions, users can summarize questions to draw general conclusions:

- Questions 1–4 can be summarized to determine the vision and direction of the overall health system. Note if the right to health and gender equality are specifically mentioned – or if broader principles of social justice are used.

- Questions 5–8 give an overview of mechanisms such as oversight, coalition building, regulation and accountability.

- Questions 9–10 describe the design of the health system and provide some insights into the vision and direction of the overall health system.
  > If possible, note where and how elements such as research and training are based on consideration of human rights and gender equality.

- Questions 11–20 help to determine specific details about the development and monitoring of strategic policy frameworks.
  > Users should note if the plan places emphasis on some leadership and governance functions over others. For example, if little can be found in the document on monitoring frameworks there may be challenges ahead in achieving the plan’s objectives.
Coherence between assessment levels can be explored by comparing findings here to obligations and commitments outlined in Assessment level 1 (analysis tables 1–4) and analysis tables 5–8 (Assessment level 2) to see if State obligations and commitments at international and national levels are reflected in the health sector strategy.

Note where coherence can be detected and where adherence to existing State obligations and commitments could enhance the health sector strategy.

The health sector strategy may reflect a commitment to the right to health and gender equality without equivalent commitments in Assessment levels 1 or 2. For example, the national development plan (analysis table 7) may be silent on gender equality but the health sector strategy may promote gender-responsive health policies. Users may want to note such discrepancies in coherence among the assessment levels – and explore the reasons and process behind this. It could be that the health sector strategy was developed in accordance with gender mainstreaming methods and therefore reflects a commitment that the national development plan does not. Such process issues are important to note and share during the dissemination of the report towards catalysing future actions towards overall policy coherence.

GENERAL CONCLUSIONS: LEADERSHIP AND GOVERNANCE

The strategy sets out an overall commitment to human rights and gender equality in the following ways:

Oversight, coalition building, regulation and accountability are ensured in the following ways:

Attention to inter-sectoral action in responding to health challenges is expressed in the following ways:

The overall vision and direction of the health system encompasses human rights and gender equality in the following ways:

The development, implementation and monitoring of strategic policy frameworks are addressed in the following ways:

Participation of groups of women and men and of vulnerable and/or marginalized population groups, as well as civil society, are/are not addressed:

The following gaps and entry points were identified:
3.3 Health systems building block: service delivery

**BACKGROUND INFORMATION**

A key issue of concern in relation to service delivery is a commitment to ensuring universal access, paying particular attention to marginalized groups and ensuring population health needs are addressed.

Ensuring that human rights and gender equality are adequately reflected in service delivery requires: attention to the establishment of specific entitlements of the population through the identification of a basic package or several basic packages tailored to specific groups; ensuring that the design of service delivery is respectful of human rights and protects the dignity of women, men, girls and boys, and that service delivery is guided by consideration of the differential needs and life circumstances of women and men of various groups. With respect to service delivery, these are some of the specific human rights and gender equality aspects to consider:

- Established entitlements of the population through identification of a basic package of services
- Attention to privacy and confidentiality in delivery of services
- Efforts to ensure accessibility of information to everyone
- Accessibility of services to both rural and urban populations, with particular attention to marginalized groups
- Attention to cultural diversity, gender norms, roles and relations
- Services that promote women’s health from a holistic and life-course perspective
- Efforts to identify and address barriers to equitable access to services.
## Analysis table 11: Service delivery

<table>

<tr>
<th>Analysis questions</th>
<th>Findings</th>
<th>Rationale</th>
<th>Selected relevant documents</th>
</tr>
</thead>
</table>
| 1. Is there a basic package or packages of services identified or referred to? If so, which does it include? If so, are gender norms, roles and relations that may lead to different experiences and outcomes for women and men acknowledged (to be addressed under each sub-question)? | **a. Child, including infant, health?**  
All children should enjoy their rights to health-care services and preventive care. Areas of attention include diminishing infant and child mortality; provision of necessary medical assistance and health care to all children with emphasis on the development of PHC; ensuring appropriate prenatal and postnatal health care for mothers, provision of adequate nutritious foods and clean drinking-water, abolishing harmful traditional practices and ensuring access to health information.  
ICESCR, Art. 12; CRC, Art. 24; CEDAW, Art. 12; CESCR General Comment 12; CESCR General Comment 14, paras. 14, 22–24; ICPD Chap. 7, 8; Beijing Platform for Action, paras. 89–111, 259–285 |  
**b. Adolescent health?**  
Adolescents are more likely to engage in risky behaviour and be exposed to sexual violence and sexual exploitation. They are vulnerable to early and/or unwanted pregnancies, STI, including HIV/AIDS. Adolescents’ right to health is therefore dependent on information and education on sexual and reproductive health, and health care that respects confidentiality and privacy and includes appropriate mental, sexual and reproductive health services and information. Programmes need to ensure the best interests of the adolescent by recognizing their evolving capacity (age and stage of development). The views of the adolescent should be given due weight in accordance with his/her age and maturity.

<tr>
<th>Analysis questions</th>
<th>Findings</th>
<th>Rationale</th>
<th>Selected relevant documents</th>
</tr>
</thead>
<tbody>
<tr>
<td>c. Sexual and reproductive health?</td>
<td>Sexual and reproductive health is a key aspect of women’s right to health. States should enable women to have control over and decide freely and responsibly on matters related to their sexual and reproductive health free from coercion, discrimination and violence. Men and women have a right to be informed and to have access to safe, effective, affordable and acceptable methods of family planning of their choice, and the right of access to appropriate health-care services that will enable women to go safely through pregnancy and childbirth. Health-related education and information, including on sexual and reproductive health, is an important element of the right to health. The following programme areas need attention: adolescent sexual and reproductive health and development; maternal health (pre- and postnatal care); emergency obstetric care; family planning (information, counselling and services); unwanted pregnancies; STI; HIV; abortion (therapeutic, sex-selective or other); and IEC (information, education, communication) programmes.</td>
<td>ICESCR Art. 10, para. 2, and Art. 12; CEDAW Art. 12, General Comment 24, para. 27; CESCGR General Comment 14, para. 8, 12, 14, 21, and 44(a); Declaration of Commitment on HIV/AIDS; International Guidelines on HIV/AIDS and Human Rights (2006), p. 85; MDG 5; Beijing Platform for Action: Strategic Objective C.3; ICPD Chap. 7</td>

## Accountability and transparency

| 14. Are any mechanisms for complaints and redress from rights-holders (patients, family members, etc) – such as, for example, client satisfaction surveys, patient charters or suggestion boxes – addressed? | Such mechanisms help to ensure that rights-holders (patients, family members, etc) are capable of expressing their opinions and of holding duty-bearers to account. | CESCR General Comment 16, para. 21; Beijing Platform for Action, paras. 89–111 |

### Issues for follow up via either interview, additional document review or otherwise
WHERE TO FIND THE INFORMATION

- The issues raised in the analysis tables are important human rights and gender equality issues and may therefore be addressed in the strategy. However, you may need to consult additional documents and staff members of the planning or delivery units of the MoH for clarifications on activities and processes not explicitly addressed in the strategy.

ANALYSIS TIPS AND NOTES FOR DRAWING GENERAL CONCLUSIONS: SERVICE DELIVERY

- There will be a range of different responses for each of these questions. Analysis of such responses should not focus on a mere "yes" or "no" answer; rather users should focus on ways that Ministries of Health can improve service delivery.

- Summarize the findings of questions 1–2 to clarify the specific entitlements outlined in the strategy. Note if and how these entitlements appear to be different for specific population groups. For example, look at when and how women and men are referred to in descriptions of basic packages of health services; note if they are discussed separately for all entitlements, or only those related to specific health areas (e.g. sexual and reproductive health). Users may draw upon other existing health data that may indicate that gender or sex differences exist in other health areas that require attention (e.g. NTDs or mental health) to identify gaps in the plan. If no sex-disaggregated data exist in the plan, nor are there any plans to incorporate such data, users can raise the issue as a gap for future research and enquiry.

- Coherence can be explored between specific service entitlements, Assessment level 1 (analysis table 1 and 2), in particular looking for commitments to health such as in the MDG, ICPD and Beijing Platform for Action.

- Summarize the findings of questions 2, 7, 11–13 to identify examples of how service delivery respects and promotes human rights and gender equality. Note which aspects of service delivery seem to have a stronger human rights or gender equality component. This can be compared to local trends and patterns, and also used to identify other areas of service delivery that could benefit from increased adherence to human rights and gender equality principles.

- Explore coherence with service delivery and Assessment levels 1 and 2 (analysis tables 1, 2, 5–7). Coherence with leadership and governance functions (analysis table 10) can be explored by comparing findings with those from questions relating to the design of the health system and mechanisms such as oversight and regulation.
Summarize the findings of questions 2, 7, 11–12 to determine how the strategy considers the differential needs and life circumstances of women and men of various groups. Note if differentiation between women and men of different groups is systematic, or only on certain issues (such as trafficking).

Compare findings with analysis table 9 (Assessment level 3) to see if process issues of developing a plan can influence the content of the plan with respect to specific issues. For example, if the plan was not developed based on consultation (see questions 1–3 in analysis table 9), it may be unlikely to find that service delivery reflects the consideration of differences in women’s and men’s lives. Users should note such issues, as they are important indicators of the importance of adhering to human rights and gender mainstreaming approaches in the process of designing, implementing and monitoring health strategies.

In addition to the three areas outlined in the Background, aspects pertaining to the quality of health service delivery are addressed in questions 9, 10 and 14. Summarize findings from these questions for an idea of core elements that may require strengthening.

When answering question 11, identify which specific health needs are documented for women and for men. Often, it will only be sexual and reproductive for women – to the exclusion of male health needs and the vast array of health conditions women face.

GENERAL CONCLUSIONS: SERVICE DELIVERY

- The strategy establishes the following specific entitlements of the population:

- The strategy ensures that the design of service delivery is respectful of human rights and gender equality in the following ways:

- The following examples were identified of how the differential needs and life circumstances of women and men of various groups have been considered:

- The following gaps and entry points were identified:
3.4 Health systems building block: health workforce

**BACKGROUND INFORMATION**

The health workforce is comprised of health service providers, health managers and support workers. A well-performing health workforce is defined as one that works in ways that are responsive, fair and efficient to achieve the best health outcomes possible, given available resources and circumstances. There should be sufficient, evenly distributed staff with a mix of skills within the country and between rural and urban settings. Quality of health-care delivery is the guiding principle when determining range and skill mix of health-care workers.

With respect to gender equality and human rights, the following areas must be considered:

- **Recruitment and retention** policies must take into consideration issues of both gender equality (equal access to training opportunities) and gender equity (fairness in professional structures among women and men). This means paying attention to both numbers of women and men in terms of recruitment as well as their respective access to decision-making and management positions.

- In terms of **skill mix**, many health systems consistently rely on informal, unpaid (or poorly paid) health workers (such as community health workers and home-based care givers). In most settings, women are more highly represented among these cadres of health workers — mirroring the overall gender-based division of labour. Such health workers often do not benefit from the same employment benefits and opportunities (including in-service training) as paid or formal health-care workers.

- **Pre- and in-service training** of the health workforce must reflect and promote the principles of gender equality and the right to health. Health curricula can project and promote masculine and biomedical standards of practice leading to ineffective health-care interventions. Health curricula need to be revised to reflect both human rights and gender in the context of patient care — as well as examining health in a holistic manner (i.e. going beyond biomedical analyses).

- **Deployment** of health workers should consider gender norms, roles and relations as well as protections for the health and safety of health workers. This could mean considering the safety of health workers to be placed in isolated areas or the need for institutional policies on abuse of health workers by colleagues and patients alike.
  
  > Given the fact that some cultural contexts require “sex-matching” of health-care workers to patients (i.e. female patients must be seen by female health-care workers), attention to issues of gender equality and gender equity among the health workforce is required.
### Analysis table 12: Health workforce

</thead>
<tbody>
<tr>
<td><strong>9.</strong> Is the importance of a representative workforce addressed, in terms of:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>a. Various population groups, such as disadvantaged populations, indigenous peoples, and minorities? Based on the principles of non-discrimination and gender equality, the health workforce should be open to all members of the population – who are entitled to equal benefits and protections once hired. In order to achieve such a balance, the health system may need to invest in addressing vulnerable groups with respect to educational opportunities, targeted recruitment campaigns and/or providing incentives for enrolment in health training (either at the formal or informal level).</td>
<td>CEDAW Arts. 4 and 11; CRPD, Arts. 5 and 27; Indigenous and Tribal Peoples Convention, 1989 (No. 169); ICPD Chap. 4, 7, 8; CESCR General Comment 14, para. 27; Beijing Platform for Action para. 89–111, 181–195; MDG 3</td>
<td></td>
</tr>
<tr>
<td>b. Women and men? It is important to pay attention to the employment dimensions of occupation, working time and earnings. Occupational segregation by gender can correspond to either vertical clustering (differentials in job status) or horizontal clustering (sex differentials according to specialization). Working time can affect workers’ economic position, especially when it results in lower monetary and non-monetary compensation among part-time workers compared to their full-time counterparts, as well as less job security and fewer opportunities for promotion.</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>10.</strong> Is there a goal to increase the capacity of duty-bearers in the health system at all levels of the State administration? (outcome level)</td>
<td>Possible capacity gaps: knowledge, organizational and coordination skills, authority (roles and responsibilities), reasources, and technical skills and abilities. Important categories of duty-bearers: a. Policy-makers b. Managers/coordinators c. Service providers d. Monitors/inspectors</td>

**Issues for follow up via either interview, additional document review or otherwise**
WHERE TO FIND THE INFORMATION

• This table addresses health workforce issues as reflected in the health strategy document itself. The issues raised in the analysis tables are important human rights and gender equality issues and may therefore be addressed in the strategy. However, you may need to consult additional documents and staff members of the planning or human resources units of the MoH for clarifications on activities and processes not explicitly addressed in the strategy.

• Many ministries of health have developed health workforce policies/strategies. Such a document may provide relevant background information or needed clarifications.

ANALYSIS TIPS AND NOTES FOR DRAWING GENERAL CONCLUSIONS: HEALTH WORKFORCE

There will be a range of different responses for each of these questions. Analysis of such responses should not focus on a mere "yes" or "no" answer; rather users should focus on strengths and weaknesses with respect to the four areas of analysis outlined in the Background Information.

In order to ensure that a rights-based and gender equality approach are applied to the health workforce, users can use the bullet points (see Background Information) as a guiding framework for summarizing the findings. The general conclusions (after the table) are structured around four areas of analysis: recruitment and retention, skill mix, training, and deployment.

Recruitment and retention can be explored by summarizing questions 4, 6, 8, 12–13. Note if and how specific guidance is included in the plan for women and men separately. If so, note if this specificity is with respect to cadre and/or staffing goals.

Issues around existing or planned skill mix can be summarized with findings from questions 3, 8 and 13. Again, note if and how male and female health-care workers are represented and if any inequalities can be detected.

Questions 8, 10 and 11 describe pre- and in-service training of the health workforce. When summarizing these responses, note if and how opportunities may be differentially provided to health workers depending on sex, cadre, location or other factors.

Questions 2, 5 and 12 capture issues around deployment of health workers. Indicate if certain groups of health workers (either by sex or cadre) appear to have privileged postings as compared to others.

Questions 14–16 look at mechanisms required to ensure that the principles of accountability and transparency are upheld. Summarize these answers, comparing them to findings from analysis table 10 on specific leadership and governance functions (see questions on mechanisms on oversight, coalition building, regulation and accountability).

There is some overlap between those questions suggested for recruitment and retention and those for deployment, as deployment could also include working conditions for the health workforce.
Questions for summarizing findings on recruitment and retention also have implications for skill mix and pre- and in-service training. Users should draw from all three clusters of questions when summarizing these areas of analysis.

Coherence can be explored between what the plan says about the health workforce, Assessment level 1 (analysis tables 1 and 2), in particular looking for obligations and commitments to CEDAW, ICPD and Beijing Platform for Action. Coherence with the national legal and policy framework (Assessment level 2) may be explored by comparing findings from the health section questions in analysis table 7.

**GENERAL CONCLUSIONS: HEALTH WORKFORCE**

- Retention and recruitment issues address human rights and gender equality in the following ways:
  > Further attention may be required in the following areas:

- Attention to gender equality and human rights when determining an adequate and appropriate skill mix in the health workforce is demonstrated in the following ways:
  > Further attention may be required in the following areas:

- Pre- and in-service training address the right to health and gender equality as follows:
  > Further attention may be required in the following areas:

- Deployment of the health workforce integrates a rights-based and gender equality approach by:
  > Further attention may be required in the following areas:
3.5 Health systems building block: medical products, vaccines and technologies

BACKGROUND INFORMATION

A well-functioning health system ensures equitable access to essential medical products, vaccines and technologies of assured quality, safety, efficacy and cost-effectiveness, and their scientifically sound and cost-effective use. A key issue of concern is that products, vaccines and technologies are chosen with respect for cultural appropriateness and life-course requirements.

Within these parameters, the following areas require specific attention to ensure a HRBA and attention to key gender and health issues:

✓ Gender inequality and other discriminatory practices affect timely and effective access and use as well as the quality and safety of medical products, vaccines and technologies in the following ways:

- "Son preference", or the privileging of boys, has been demonstrated to affect access and use of medicines and vaccines in several settings. This disadvantages the health of girls.
- Poverty impacts the ability to pay for medicines, vaccines and other technologies, which can affect both women and men of different social groups. However, many women bear a higher burden of illness due to lack of decision-making power within the household (on household expenses) and often do not benefit from social protections such as private employer insurance to access such medical products (where applicable); these factors may create higher obstacles to efficient and effective access and use by women of lower socioeconomic status.
- Poverty also impacts access and use through indirect costs such as transportation costs to a pharmacist or specialist centre for use of medical technologies such as X-rays.
- Some studies find that women use more medications than men, and may even be targeted differently through advertisements, which may detract from effective use of medicines (e.g. "rational use of medicines").
- Stigma related to using certain types of medical products may contribute to decreased access and use among vulnerable groups, such as people living with HIV or those with mental disabilities.
- Inclusion of sex-specific health issues (pregnancy, cervical or prostate cancer, exam equipment such as specula for gynaecological exams, etc.) on the essential drugs list can help to facilitate access for women and men.
- Clinical trials should include male and female participants from different social groups to ensure safe medical products for both sexes across the life course (this includes attention to how the safety and efficacy of medical products affect, or are affected by, pregnancy).

</table>
WHERE TO FIND THE INFORMATION

- This table addresses medical products, vaccines and technologies as reflected in the health strategy document itself. The issues raised in the analysis tables are important human rights and gender equality issues, and may therefore be addressed in the strategy. However, you may need to consult additional documents and staff members of the planning or medicine units of the MoH for clarifications on activities and processes not explicitly addressed in the strategy.

- Many ministries of health have developed medicines policies/strategies. Such a document may provide relevant background information or needed clarifications.

- The WHO Model Lists of Essential Medicines has been updated every two years since 1977. The current version, the 16th list, updated in March 2010; see http://www.who.int/medicines/publications/essentialmedicines/en/

ANALYSIS TIPS AND NOTES FOR DRAWING GENERAL CONCLUSIONS: MEDICAL PRODUCTS, VACCINES AND TECHNOLOGIES

- In order to focus on key human rights and gender equality issues, users are encouraged to analyse findings around themes of access and use of medical products and their quality and safety. This will allow for general categorization and summarization in two areas of analysis.

- Summarize questions 1–6, 9–10, 12 to determine how access and use of medical products are addressed. Note how attention is given to human rights and gender equality.

- Questions 1, 7–8 can be summarized to identify how quality and safety are addressed. Note the linkages to human rights and gender equality.

- Question 11 addresses the element of participation while question 12 captures the issue of accountability and transparency in relation to indicators.

- When findings are "no" answers, highlight these findings as potential avenues for further attention.

- Coherence can be explored by comparing findings between what the plan says about the health workforce. Assessment level 1 (analysis tables 1 and 2), in particular looking for obligations and commitments to CEDAW, ICPD and Beijing Platform for Action. Coherence with the national legal and policy framework (Assessment level 2) may be explored by comparing findings from the health section questions in analysis table 7.
GENERAL CONCLUSIONS: MEDICAL PRODUCTS, VACCINES AND TECHNOLOGIES

- Access to, and use of, medical products, vaccines and technologies uphold a rights and gender-based approach in the following ways:

  > Further attention may be required in the following areas:

- Quality and safety of medical products, vaccines and technologies uphold a rights and gender-based approach in the following ways:

  > Further attention may be required in the following areas:
3.6 Health systems building block: information

**BACKGROUND INFORMATION**

A well-functioning health information system is one that ensures the production, analysis, dissemination and use of reliable and timely information on determinants of health, health status and health system performance. A key area of concern is disaggregating data by sex, age, ethnic affiliation and socio-economic condition, as appropriate, to ensure reliable tracking mechanisms.

A general rule of thumb when thinking of what to measure is to remember that *what gets measured gets done*. In other words, if health information systems cannot measure and generate information to facilitate the availability, accessibility, acceptability and quality (AAAQ) of health services, goods and facilities, efforts in other building blocks may be hampered. Ensuring that gender equality and human rights are adequately reflected in health information systems requires attention to the following areas:

- **Selection and development of indicators**
  - It is important that the selection of indicators within the health information system includes the "right information" needed to conduct both a rights and gender-based analysis. This includes:
    - Quantitative information from basic health status indicators as well as determinants of health data such as measures of intimate partner violence, unemployment or literacy rates.
    - Qualitative indicators that can measure perceptions of illness or health (e.g. self-rated health), perceived quality or satisfaction with health services and/or treatment options for men and women of different groups. Such information may be found in data sets outside of the health information system.
    - Adequate disaggregation of data is necessary; a bare minimum is to have the data disaggregated by sex and age (where appropriate). If the health information system in question has sufficient capacity, health data should also be further broken down by place of residence (urban versus rural), and socio-economic status (household income, educational achievement and occupation status).
    - Indicators on health system performance should also incorporate measures of the right to health and gender mainstreaming to ensure that tracking of progress in these areas is possible.
  - Development of new indicators should be based on principles of participation. When developing indicators, it is important to bring together both users and producers of data to determine data needs (within and beyond the health sector) as well as appropriate and sound methods of data collection and analysis.
  - Capacity-building activities on both the development and selection of health indicators.
✓ **Analysis of health information** should be done in a broader determinants of health framework that includes rights and gender-based analysis methods. Limiting the analysis of health information to statistical reporting or biomedical frameworks will not yield necessary information to develop and implement health strategies in a human rights and gender-based approach\(^5,22\).

- In order to conduct a rights or gender-based analysis of health information, data from other sectors (representing determinants of health) are required. This means that coordination and effective use of data generated across sectors is necessary.

✓ **Dissemination of health information** should constitute a two-way process in that both the health system and its beneficiaries have access to health information. This requires reporting health information with appropriate disaggregation in formats that all stakeholders can access (e.g. in simple, popular communication methods with due attention to delivery methods and sites, linguistic considerations and ways in which groups will use the information for advocacy, programming, policy-making or otherwise\(^15,16\)).

- Health information should also be communicated within the health system, across different levels within the country (district, sub-national and national) and within health facilities (primary, secondary and tertiary levels of care).

<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>3. Is the need for a mix between health status, determinants of health and health system performance measures reflected?</td>
<td>An adequate mix of measures and methods is required within health information to identify health status and outcomes for the population. This makes it possible to identify root causes of illness and track the performance of the health system.</td>
<td>WHO Core Health Indicators; Implementation of GA Resolution 60/251 of 15 March 2006 entitled “Human Rights Council” (A/HRC/5/3) 31 May 2007; (A/HRC/4/8) 7 Feb. 2007, para. 32; ICPD Chap. 7, 8, 12; Beijing Platform for Action, paras. 89–111</td>
<td></td>
</tr>
<tr>
<td>Note: Users should indicate “yes” to all three areas, a “partial yes” if to one or more, and “no” only if there is no mention made whatsoever of an adequate mix of health indicators.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Is the importance of measuring the prevalence, causes and health consequences of violence against women promoted?</td>
<td>Violence against women, a human rights violation rooted in practices of gender inequality, contributes to multiple health problems. Pres (health surveys) are a means of determining the magnitude of the problem, identifying health-related consequences and developing appropriate health sector responses.</td>
<td>CEDAW General Recommendation 24, para. 15; Beijing Platform for Action: Strategic Objective D.2; Report of Special Rapporteur on violence against women, its causes and consequences (A/HRC/7/6), paras. 26, 28, 30, 34; ICPD Chap. 4, 8, 12; Beijing Platform for Action, paras. 112–130</td>
<td></td>
</tr>
<tr>
<td>5. Is a facility-based health information system at all levels supported?</td>
<td>Strengthening facility-based health information (or patient records) systems in both public and private facilities is a key element towards having sub-national and national health information that can then identify vulnerable groups and health inequalities – and develop sound health sector responses.</td>
<td>CESC General Comment 14, para. 36; (A/HRC/4/8) 7 Feb. 2007, para. 32; ICPD Chap. 12; Beijing Platform for Action paras. 89–111</td>
<td></td>
</tr>
<tr>
<td>6. Are provisions included for data collection on private health-care services?</td>
<td></td>
<td>General Comment 14, para. 35; ICPD Chap. 12; Beijing Platform for Action, paras. 89–111</td>
<td></td>
</tr>
<tr>
<td>Analysis questions</td>
<td>Findings</td>
<td>Rationale</td>
<td>References</td>
</tr>
<tr>
<td>--------------------</td>
<td>----------</td>
<td>-----------</td>
<td>------------</td>
</tr>
<tr>
<td>7. Is data collection on economic accessibility for users provided or encouraged? If so, does the strategy indicate aspects of socio-economic status/affordability and differences for women and men of different ages and groups?</td>
<td>Given the fact that underlying determinants of health such as socio-economic factors are often measured outside of the health information system, it is important to factor in indicators that can determine if and how economic factors (at both household and individual levels) may influence access to health services by different groups of women and men. Such information is often gathered at the household level, which may mask intra-household differences with respect to access to household resources necessary to seek timely health care for men and women of different ages and in different areas.</td>
<td>Beijing Platform for Action: Strategic Objective A1; Report of Special Rapporteur on the Right of everyone to the enjoyment of the highest attainable standard of health (A/60/348), para. 87; ICPD Chap. 12; Beijing Platform for Action, paras. 89–111, 206–208</td>
<td></td>
</tr>
<tr>
<td>8. Is research and/or the dissemination of information on women's health promoted? Note: Users should indicate if both research and information dissemination is included, or if only one of the two.</td>
<td>Health research contributes to both improved data collection methodologies and indicator development. Such research must adopt both a human rights and gender-based approach to conceptualizing the health of different groups of women and men. As the health of women has often been understood based on male norms of symptomology and experience and/or limited to sexual and reproductive health, it is important to promote broader understandings of determinants of women’s health and women’s health outcomes through research and knowledge sharing.</td>
<td>CEDAW General Recommendation 24; Beijing Platform for Action: Strategic Objective C.4; ICPD Chap. 4, 8, 12</td>
<td></td>
</tr>
<tr>
<td>9. Is reference made to gaps in existing health information? If so, indicate if the gaps mentioned highlight the need for information on determinants of health.</td>
<td>Identifying gaps in information is a first step towards developing plans to address them. For example, if the current situation is one that only has aggregate mortality and morbidity data, the plan should indicate that further disaggregation is required as well as an inclusion of other health measures (underlying determinants of health and health system performance).</td>
<td>CESCR General Comment 14, paras. 16, 63; (A/HRC/4/8) 7 Feb. 2007, para. 32; Report of Special Rapporteur on the Right to Health (A/60/348), para. 87; ICPD Chap. 12; Beijing Platform for Action, paras. 89–111, 206–208</td>

## Analysis questions

<table>
<thead>
<tr>
<th>Analysis questions</th>
<th>Findings</th>
<th>Rationale</th>
<th>References</th>
</tr>
</thead>
<tbody>
<tr>
<td>10. Is the need to involve various stakeholders in the creation, analysis and dissemination of health information mentioned?</td>
<td>Addressing determinants of health, such as gender equality, requires a multi-sectoral approach. Within the field of health information, this is even more crucial in order to determine sound ways to include measures of human rights and gender equality. Bringing together users and producers of health information from various sectors will also ensure that the type of information generated can serve multiple interests.</td>
<td>Implementation of GA Resolution 60/251, (A/HRC/5/3) para. 47; (A/HRC/4/8) 7 Feb. 2007, para. 32; ICPD 12, 15.6; Beijing Platform for Action, paras. 89–111, 206–208</td>
<td></td>
</tr>
<tr>
<td>11. Is there reference made to the need for a rights or gender-based analysis of health data?</td>
<td>Limiting the analysis of health information to statistical tabulations or mortality tallying will not yield necessary information to develop and implement health strategies that reduce health inequities and realize the right to health.</td>
<td>CESC General Comment 20; CEDAW General Recommendation 9; CEDAW General Recommendation 24, para. 26; ICPD 4, 8, 12; Beijing Platform for Action, paras. 89–111, 206–208</td>
<td></td>
</tr>
<tr>
<td>12. Are capacity gaps identified to strengthen the quality of data and health information systems? If so, is enhancing human rights and gender-related capacities included in the identified gaps?</td>
<td>Identifying capacity gaps for quality health data and overall health information systems could be considered a proxy indication of the State’s commitment to building national or sub-national capacities to address human rights and gender equality within the health system through generating information that will yield evidence-based policies, programmes and services reflective of the right to health and gender equality.</td>
<td>CEDAW General Recommendation 9; CEDAW General Recommendation 10; (A/HRC/4/8) 7 Feb. 2007, para. 32; Report of Special Rapporteur on the Right to Health (A/60/348), para. 74; ICPD Chap. 12; Beijing Platform for Action, paras. 89–111, 206–208</td>
<td></td>
</tr>
<tr>
<td>13. Is the importance of ensuring that all levels of health facilities (primary, secondary and tertiary) have equal access to health information mentioned?</td>
<td>District and sub-national health planners and health workers require access to health information on both the specific situation of the communities in which they work as well as the broader range of health information. Such access can help systems support better quality services targeted towards the needs of the population.</td>
<td>CEDAW General Recommendation 24, para. 10, 13, 17; CEDAW General Recommendation 22; ICPD Chap. 12; Beijing Platform for Action, paras. 89–111, 206–208</td>
<td></td>

</tr>
</tbody>
</table>
WHERE TO FIND THE INFORMATION

This table addresses health information reflected in the health strategy document itself which can provide important insights into the quality of data and analysis used to prepare the strategy as well as goals/targets established within. However, you may need to consult additional documents and staff members of the planning or information/statistics units of the MoH for clarifications on activities and processes not explicitly addressed in the strategy.

ANALYSIS TIPS AND NOTES FOR DRAWING GENERAL CONCLUSIONS: INFORMATION

There will be a range of different responses for each of these questions. Analysis of such responses should not focus on a mere “yes” or “no” answer; rather users should focus on ways that Ministries of Health can improve information systems.

Information and data are essential for planning and ensuring accountability. This table enables answers to the following question: How far does the government make a well-functioning information system a priority in the strategy and how far does such a system incorporate human rights considerations, such as disaggregated data?

Summarize the findings of questions 1–4, 7–8, 10, 14 for how the strategy relates to the selection and development of indicators. Note in particular how gender equality and human rights are reflected in developmental issues of new indicators (for example, questions 3, 4 and 8).

Users may want to compare what the plan says about health information and the actual sources of information used to develop the plan (see analysis table 9, Assessment level 3). The use or lack of appropriately disaggregated data and incomplete indicators used in the development of the plan may be indicative of the quality of existing health information and can therefore be highlighted as capacity gaps for health information systems.

Summarize the findings of questions 11, 14 and 16 to determine the basis for analysis of health information. Note if and how explicit mentions of gender analysis are used in the plan. If gender analysis is not mentioned, note what kind of “social justice analysis” could be deduced from the plan – if any.

Summarize the findings of questions 13, 15–16 to clarify strategies for dissemination of health information. Note groups of stakeholders that may be excluded from receiving or understanding health information as set out in dissemination plans. Such exclusion may be stated explicitly or implicitly in the plan. Users may use such notes for broader discussions on health policy-making processes and the need for information sharing in evidence-based decision-making.

Coherence across all three categories can be explored by comparing findings to Assessment level 1 (analysis tables 1 and 2), in particular looking for obligations and commitments to CEDAW, MDG and Beijing Platform for Action. Coherence with the national legal and policy framework (Assessment level 2) may be explored by comparing findings with the national development plan (analysis table 7) and the institutional framework (analysis table 8), in particular regarding monitoring mechanisms for human rights and gender equality as this may be indicative of a national commitment on statistics.
GENERAL CONCLUSIONS: INFORMATION

- The following human rights and gender equality considerations are incorporated in the selection and development of indicators:

- The strategy sets the following directions for analysis of health information in terms of human rights and gender equality:

- Dissemination of health information encompasses human rights and gender equality considerations in the following ways:

- The following gaps and entry points were noted:
3.7 Health systems building block: financing

**BACKGROUND INFORMATION**

A good health financing system raises adequate funds for health, in ways that ensure people can use needed services, and are protected from financial catastrophe or impoverishment. Universal coverage of health care means that everyone in the population has access to appropriate promotive, preventive, curative and rehabilitative health care when they need it and at an affordable cost. Universal access implies equity of access and financial risk protection. With respect to human rights and gender equality, health financing must promote reduced inequalities in health status between individuals and favour the most disadvantaged. These elements are also referred to as horizontal and vertical equity criteria.

Three interrelated functions are involved in order to achieve universal coverage: (1) how financial contributions to the health system are collected from different domestic and external sources (revenue collection); (2) how revenue/contributions are pooled so that the risk of having to pay for health care is not borne by each person individually (risk pooling); and (3) how these funds are spent on health services (purchasing). Risk pooling links to the principle of financial-risk protection, to ensure that the cost of care does not put people at risk of financial catastrophe. A related objective of health-financing policy is equity in financing, which means that households contribute to the health system on the basis of ability to pay. Expenditures in health need to prioritize health service with a high overall health impact while ensuring fair distribution of benefits, instead of disproportionately benefiting rich or urban populations.

Specific human rights and gender equality aspects to consider with respect to all health financing functions (revenue collection, risk pooling and purchasing) include:

- Services, goods and facilities should have adequate funding allocations
- Contributions to the health system on the basis of individuals'/households' ability to pay with attention to both direct and indirect costs
- People are protected from financial catastrophe or impoverishment, avoiding out-of-pocket expenditures with due attention to how gender inequality may affect different groups
- Particular attention to needs and life circumstances of women and men to ensure vulnerable groups have access to needed services
- Promoting transparency and accountability in health financing systems
- Development of financing schemes should be based on a participatory process
- Attention to the need for free/subsidized care for certain conditions, such as maternal health as stipulated in CEDAW, to avoid financial burdens for biological and social roles of women or men.
### Analysis table 15: Financing

<table>

<tr>
<th>Analytical questions</th>
<th>Findings</th>
<th>Rationale</th>
<th>Selected relevant documents</th>
</tr>
</thead>
</table>
| 1. Are there references to health financing mechanisms that support entitlements to universal affordable health care?  
    If so, do they consider differences between women's and men's health financing needs? | | States have an obligation to take concrete and targeted steps to ensure that health systems are established to provide adequate access to health services for all. The State must use maximum available resources and identify effective health financing mechanisms to ensure that health facilities, goods and services are accessible and affordable for all. | ICESCR Art.2; CESCR General Comment 14, paras. 12(b), 19; CESCR General Comment 19, paras. 4, 13; CESCR General Comment 3; Report of Special Rapporteur on the Right to Health (A/HRC/7/11), para. 96; Beijing Platform for Action: Strategic Objectives C.1(i); ICPD Chap. 8; Beijing Platform for Action, paras. 109–111, 345–361 |
| 2. Does the strategy address the funding sources for health services including out-of-pocket expenditure and/or schemes such as social health insurance?  
    If so, are the implications of these policy options on different social groups or women and men considered? | | Financial contributions to the health system need to be collected in ways that ensure that low-income households are not disproportionately burdened with health expenses as compared to richer households. With respect to the right to health, States should provide those who do not have sufficient means with the necessary health insurance and health-care facilities. | ICPD Chap 8; Beijing Platform for Action, paras. 109–111, 345–361 |
| 3. Are strategies included to minimize out-of-pocket spending?  
    If so, is there an overview of the kinds of out-of-pocket expenditure, and to whom and for what reasons out-of-pocket expenditures are incurred? | | | CEDAW General Recommendation 24, para. 9; ICPD Chap. 8; Beijing Platform for Action, paras. 109–111, 345–361 |

</table>

**Issues for follow up via either interview, additional document review or otherwise**
WHERE TO FIND THE INFORMATION

• This table addresses financing issues as reflected in the health strategy document itself. The issues raised in the analysis tables are important human rights and gender equality issues and may therefore be addressed in the strategy. However, you may need to consult additional documents and staff members of the planning or health financing units of the MoH for clarifications on activities and processes not explicitly addressed in the strategy.

• Many Ministries of Health have developed health financing policies/strategies. Such a document may provide relevant background information or needed clarifications.

ANALYSIS TIPS AND NOTES FOR DRAWING GENERAL CONCLUSIONS: FINANCING

◊ There will be a range of different responses for each of these questions. Analysis of such responses should not focus on a mere "yes" or "no" answer; rather users should focus on strengths and weaknesses with respect to the functions of the health financing system.

◊ When findings are "no" answers, highlight these findings as potential avenues for further attention.

◊ Use the functions and the points listed in the Background Information as an analytic framework when summarizing questions in table 15.

> **Summarize the findings of questions 1, 2, 3 and 8** to determine the strategic directions for revenue collection.

> **Summarize the findings of questions 1, 2, 6 and 7** to identify examples of how the strategy addresses equality and non-discrimination through risk pooling.

> **Summarize the findings of questions 4, 9, 10 and 11** to clarify how the strategy gives attention to priority setting, and accountability and transparency, in selecting interventions and paying for services and service providers.

◊ Coherence with the national legal and policy framework (Assessment level 2) may be explored by comparing findings of analysis table 7.
### GENERAL CONCLUSIONS FOR ANALYSIS TABLE 15: FINANCING

- Human rights and gender equality are addressed in the following ways with respect to revenue collection:
  - Further attention may be required in the following areas:

- Human rights and gender equality are addressed in the following ways with respect to risk pooling:
  - Further attention may be required in the following areas:

- Human rights and gender equality are addressed in the following ways with respect to purchasing:
  - Further attention may be required in the following areas:

Feedback questionnaire

Your feedback is important for future tool improvements. Your inputs to future revisions are very appreciated and can be compiled in the following form and sent anonymously by regular mail, or by email at: genderandhealth@who.int or humanrights@who.int. Please ensure to include “Review comments on human rights and gender equality in health sector strategies: how to assess policy coherence” in the subject field.

Thank you for taking the time to send us your comments and suggestions.

1. In what context was the tool used (during a review of, or preparation for a new health sector strategy or a separate study; in its entirety or only selected parts, etc.)?

2. Which stakeholders participated in:
   a. The review team?
   b. The planning of the review?
   c. Discussions about the findings?

3. Overall, was the practical guidance on how to use the tool helpful? What additional guidance would have supported your review?
4. Was the tool user-friendly? Provide details on aspects that facilitated your use of the tool, and ways to make the tool easier to use in practice.

5. Was the review helpful in generating a multisectoral and interdisciplinary dialogue with diverse stakeholders on human rights and gender equality in relation to health? In what ways?

6. Was the tool helpful in identifying gender equality and human rights-related gaps and opportunities?

7. What actions have taken place, or are planned, following the review?

8. Please add any additional suggestions/comments on how the tool can be improved here:
The centrality of human rights and gender equality to health and development has been upheld by world leaders at the Millennium Summit and other more recent global events. This tool is designed to move from rhetoric to practice.

It supports a multi-stakeholder process aimed at ensuring that national health sector strategies comply with human rights and gender equality. It does so by posing critical questions and providing guidance when reviewing an existing – or developing a new – national health sector strategy.

The World Health Organization (WHO), the Swedish International Development Cooperation Agency (Sida) and the UN Office of the High Commissioner for Human Rights (OHCHR) are pleased to collaborate in strengthening efforts to realize the enjoyment of the highest attainable standard of health - a fundamental human right that belongs to every man, woman and child.
