

**Chief Executives Board  
for Coordination  
Spring 2012 Regular Session**

**17 April 2012**

**CEB Joint Statement to Rio +20**

1. We, members of the United Nations System Chief Executives Board, are strongly committed to the success of the United Nations Conference on Sustainable Development (Rio+20). We recognize that sustainable development has been an overarching goal of the international community since the United Nations Conference on Environment and Development (UNCED) in 1992. We urge world leaders who will gather at Rio+20 to renew the political commitment towards this goal so as to reset the world on a sustainable development path.
2. We reaffirm the continuing validity of the UNCED outcomes. Sustainable development, with its interlinked economic, social and environmental pillars, remains a top priority for our organizations.

***Progress towards sustainable development***

3. In the two decades since the UNCED, the world has undergone tremendous change. We have added nearly one and a half billion people to the planet – around a billion in our cities – and brought hundreds of millions of people out of the worst kind of poverty. Yet more needs to be done. Actions taken today and during the next decades will define our population future.
4. Many people now live longer and healthier lives, child mortality rates have declined substantially. Maternal mortality has fallen, more women have access to reproductive health services, more children and young people – boys and girls alike – are attending and completing school. There has been considerable progress in empowering women and disadvantaged groups. Information and Communication Technologies (ICTs) are broadening people's horizons, improving their education and expanding their choices.
5. We acknowledge the broad progress that has been made in many regions, including in achieving the Millennium Development Goals (MDGs). However, despite the gains, we observe massive disparities between and within regions and countries.

***New global landscape***

6. We have witnessed a redesign of the global political and economic landscape with a new set of pace-setters and change-makers, including dynamic developing countries, and within countries, women and youth in particular.
7. However, the benefits of globalization have not been shared equally. Economic growth has not generated sufficient jobs in the quantity and quality needed. High youth unemployment and gender inequality

persist, dimming the aspirations of a generation. The voices of women and youth are still too often not sufficiently taken into account in decision-making.

8. Nearly one billion people go hungry. Some 200 million children suffer stunting. We urge world leaders to redouble efforts to eradicate hunger and realize food and nutrition security for all. We call for scaled-up investments in social protection, safety nets and food assistance programs as well as in sustainable agricultural production, to ensure that nutritious food is available and accessible for all, particularly the most vulnerable people.

### ***International cooperation and action***

9. We need to reinvigorate Agenda 21's global partnership for sustainable development and significantly scale up our achievements to date. We have no time to waste.
10. We recognize that addressing long-term threats to human and ecological well-being through international cooperation and action has been difficult. Governments are often pressed to cope with immediate domestic socioeconomic difficulties and the aftermaths of disasters. However, it is equally important to be mindful of inter-generational equity and protecting our planetary home.
11. Countries have reduced fatalities from disasters thanks to growing prosperity and progress in science and technology. Yet many environmental challenges require urgent international cooperation and action to avoid catastrophic damage to the planet we leave to our descendants. A binding agreement to limit greenhouse gases emissions must quickly be reached to prevent mass migration and displacement from climate change impacts.

### ***Revisiting the current economic model***

12. The multiple global crises have brought into question our current volatile economic model which has neglected natural resources impacts and social justice. Food and fuel crises have particularly highlighted the risks arising from resource constraints such as energy. A new development model is now needed centered on the planet, its people, and on fairness, with full respect for all human rights and fundamental freedoms.
13. We recognize that broad-based economic growth has been and continues to be the most effective contributor to poverty eradication. But meeting the needs of a growing world population requires a more balanced distribution of resources.
14. Growth in the 21<sup>st</sup> Century must use far less energy and resources, pollute less, generate sufficient decent work, and include all sectors of the population, including women and youth. We see an inclusive green economy, enabled by sufficient institutional and policy space, as a tool that provides such growth.
15. We recognize sustainable consumption and production patterns and trade as enablers of such growth. Policies must avoid trade protectionism and negative impacts especially on the poor and vulnerable groups and on the livelihood potential of future generations.
16. Nations will need to overcome a number of hurdles – financial, technological and institutional - to make the most of the opportunities that a green economy might offer so as to benefit all sectors of society, including the poor and most vulnerable. Capacity building in the areas of science, technology and

innovation in developing countries--enabled through increased support from the international community, and facilitated by ICTs--is needed to smooth the transition to sustainable development.

### ***Goals, accountability, and measuring progress***

17. We are heartened that momentum is building for agreeing at Rio+20 to define sustainable development goals (SDGs). These will need to complement and reinforce the MDGs, which have been instrumental in advancing poverty eradication and social development. The SDGs should form part of an integrated, coherent agenda for addressing the critical changes of the post-2015 period.
18. We stress that a key feature of SDGs should be that, while respecting national sovereignty and policy space as well as common but differentiated responsibilities and other UN principles, they would apply to all countries and unite them in common efforts to tackle sustainable development challenges. We strongly emphasize that many developing countries will continue to need financial and technological support in their efforts to integrate the three pillars of sustainable development.
19. Our hope is that Rio+20 will deliver a firm commitment in this regard and identify the critical areas for the further careful elaboration of goals by an agreed deadline.
20. A number of priority issues have emerged which might serve as the basis for identifying sustainable development goals at Rio+20. Among these are: equity, poverty, decent jobs, sustainable agriculture and food security, energy, water, sanitation, climate change, oceans, sustainable cities, sustainable transport, tourism, disaster risk reduction, health including reproductive health, population, education, including for sustainable development, science, culture, youth, access to information, gender equality and women's empowerment and better indicators, accounting frameworks, and analytical tools for progress, based on more and better data, taking into account the needs of people today and in coming generations.

### ***Institutional Framework for Sustainable Development***

21. Rio+20 provides an opportunity to strengthen the institutional framework for effective coordination and support to Member States in achieving sustainable development.
22. We urge world leaders to commit and follow through in integrating the three pillars of sustainable development, accelerating implementation and improving coherence of actions among all actors, including different parts of the UN system and the international financial institutions. We urge that the integration of the pillars be reflected in improved and integrated decision-making at all levels, reflecting the voices and fostering the participation of all major groups of society, including women, children and youth, indigenous peoples, workers and trade unions, business and industry, farmers, local authorities and the scientific and technological communities.
23. We call for putting in place a strengthened institutional framework to advance integration, implementation and coherence and for concrete proposals to make that happen. A number of governments and civil society organizations are calling for a Sustainable Development Council. Others propose a high-profile body for sustainable development. Many advocate strengthening the General Assembly and ECOSOC to guide and promote sustainable development. Many also propose the strengthening of UNEP.

### ***UN system coherence***

24. We must better organize expertise within the UN system and the international community to deliver coordinated and coherent policy advice, capacity-building, and finance to governments to assist them with the design and implementation of public policies and strategies for sustainable development.
25. These issues require a coordinated approach by the UN system, stakeholders from government, civil society and the private sector, to find joint innovative and lasting solutions to the challenges of sustainable development.
26. Rio+20 should identify a framework of action and seek a substantial increase and allocation of new, additional, predictable, and adequate financial resources, official development assistance (ODA), grants and credits and investment – particularly for social sectors, including women and youth, and for the development of infrastructure and productive capacities--in order to support the implementation of national policies and development strategies in developing countries.

### ***Reviving the spirit of Rio***

27. We also reaffirm the importance of respect for all human rights and fundamental freedoms, including the right to development, as well as gender equality and of a commitment to just, equitable and democratic societies for sustainable development. We urge world leaders to achieve ratification of and universal participation in all the treaties and conventions promoting the integration of the three pillars of sustainable development, including those relating to human rights and fundamental freedoms, such as workers and migrants rights, rights of refugees, stateless and internally displaced persons, and rights of women, children and youth, as well as to natural resources, international transport, oceans and seas and land use.
28. Rio+20 must provide the roadmap to the future we want – a future with peace, dynamic economic and social development, universal social well-being, and a healthy and equitable environment for present and future generations where women and men, boys and girls equally contribute to and benefit from development.
29. Rio+20 must revive the “spirit of Rio” and be a development implementation conference. It must result in a compelling political document that must be accompanied by actions.
30. Let all states and stakeholders also come to Rio+20 ready to announce and launch new voluntary initiatives for sustainable development that will make a measurable difference to peoples’ lives and the welfare of ecosystems.
31. As Chief Executives of the UN System, it is our sincere hope that the outcomes of Rio+20 will rise to these challenges.
