UNOSAT REPORT IN SUPPORT OF OHCHR COMMISSION OF INQUIRY ON HUMAN RIGHTS IN ERITREA

Satellite Imagery Based Activity Analysis

Sawa Military Camp, 6th Brigade Prison
3 April 2015

This report was produced by UNITAR-UNOSAT in response to questions from OHCHR Commission of Inquiry on Human Rights in Eritrea concerning the location and operational status of alleged prisons in the country.

Sawa Military Camp Overview Map

Inset #1: 6th Brigade Prison
3 April 2015

Inset #2: Enda Safa Prison
3 April 2015

Map Scale for A4: 1:22,000

The depiction and use of boundaries, geographic names and related data shown here are not warranted to be error-free nor do they imply official endorsement or acceptance by the United Nations. UNOSAT is a program of the United Nations Institute for Training and Research (UNITAR), providing satellite imagery and related geographic information, research and analysis to UN humanitarian and development agencies and their implementing partners.
According to multiple eyewitness accounts, the 6th Brigade Prison, is located east of the military camp (map page 1). Former inmates depict the location of the detention facility East of the hill where guard posts are used to control movement in and out of the installation. UNOSAT satellite imagery based analysis identified the location and main features of this facilities inside the fenced perimeter that are being used to detain prisoners. Furthermore, UNOSAT assesses that the 6th Brigade Prison seems to be operational. Imagery between 2005 and 2015 shows construction activity not only inside the prison facility, but across the military camp.
Enda Safa detention facility is located east of Sawa military camp and approximately 550 meters north of the 6th Brigade detention facility. UNOSAT satellite imagery based analysis identified the location and main features of this facility inside the fenced perimeter. The presence of a vehicle outside the fenced perimeter in the imagery collected on 3 April 2015 indicates that the compound is still in use. Since 2005, the perimeter of the compound has increased, and the fence has been reinforced.
Wi'a Military Training Camp and Detention Facilities
9 March 2015

The depiction and use of boundaries, geographic names and related data shown here are not warranted to be error-free nor do they imply official endorsement or acceptance by the United Nations. UNOSAT is a program of the United Nations Institute for Training and Research (UNITAR), providing satellite imagery and related geographic information, research and analysis to UN humanitarian and development agencies and their implementing partners.
According to multiple eyewitness accounts, Wi'a was abandoned in 2009 after a meningitis outbreak. UNOSAT satellite imagery-based change detection analysis identified nine buildings with new roofs in imagery from 2015. Imagery from 9 March 2015 shows nine previously roofless buildings, as seen on imagery from 28 December 2010 (blue arrows), with new roofs. This is a clear indication of activity between 2010 and 2015. Additionally, UNOSAT identified a possible graveyard used to bury the dead and the dry riverbed purportedly used by inmates to wash (see Figure 2).
Mai Serwa Detention Facilities Overview Map
26 May 2015

The depiction and use of boundaries, geographic names and related data shown here are not warranted to be error-free nor do they imply official endorsement or acceptance by the United Nations. UNOSAT is a program of the United Nations Institute for Training and Research (UNITAR), providing satellite imagery and related geographic information, research and analysis to UN humanitarian and development agencies and their implementing partners.
Mai Serwa is a detention facility located approximately 8 km northwest of the city of Asmara. UNOSAT satellite imagery-based analysis identified the location and main features of this facility. According to witnesses, the detention facility has various types of cells. Witnesses reported the existence of metal containers, two underground trucks containers and several zinc hangars of about 25 square meters. Imagery collected on 31 July 2010 shows the presence of a total of 28 structures that are possibly metal containers. Imagery also shows a total of 14 different structures that match the description as zinc hangars. As of 26 May 2015 the number of possible metal containers remains similar, approximately 26, although their distribution has changed. The possible hangars are still visible by 26 May 2015.
This is a preliminary assessment and has not yet been validated in the field. Please send feedback to UNITAR/UNOSAT at the contact information below.
