Answers to the questionnaire on the OHCHR Study on children's right to health

1. Main health challenges related to children

The indicators of perinatal mortality in 2010 decreased to 10 from 13,1 per 1000 born alive in 1990 in Azerbaijan. Indicators of child mortality under age of 1 decreased from 26,3 in 1990 to 8,1 in 2010; and under age of 5 from 37,2 in 1990 to 13,7 in 2010. The main reasons of child mortality in the country are the deceases of respiratory organs and the deceases appearing in perinatal period, as well as the cases of congenital anomaly. The number of children born by women under age of 18 has significant impact on it. Currently, the reforms are conducted for applying the WHO standards on child mortality.

The maternal mortality rates per 100 thousand live births from 9.3 in 1990 increased to 15.7 in 2010 in Azerbaijan. However, comparing to 1995 this figure is now approximately half decreased. In 1995 the number of children born by the women at the age of 15-17 was 2198; in 2010 this figure was 4103, indicating approximately double increase. Taking into consideration the indicators in relation to the total number of children born alive this figure increased from 1.5% to 2.5%.

Poor access to women consultation services in rural areas and home based births are the main problems in rural areas. Special attention should be paid to promotion of reproductive health and measures must be taken to ensure women's access to the consultations in this direction. According to the Demographic and Health Survey conducted in 2006, the indicator of birth in medical institution on urban areas was 91,2%, on rural areas was 64.2%. The least (57.4%) level of birth in medical institutions was observed in the Southern regions.

The statistics of early marriages in Azerbaijan are determined by the number of children born by non-officially married women and the women under the age of 15-17. In 1990, number of children born by the officially married women was 4 800 persons, but in 2010 this figure was 25 385. As well as the number of children born by women under the age of 15-17 as noted above, in comparison with the year 1995 has increased 2 times. However, the statistics of the main causes of death among children under 18 shows the least number of women who died during pregnancy and childbirth (1 person in 2009).

In Azerbaijan in recent years the number of children born with low weight (weight less than 2500 gr) has increased. Thus, the number of the children increased to 9554 in 2008 (7.1%) from 6478 (7.0%) in 2003. Failure to provide the necessary vitamins for mothers during pregnancy is being considered as the main problem. According to the Demographic and Health Survey conducted in 2006, the ratio of the infants with low

0041229011844

weight is higher in Daglig Shirvan region (19%), being 3% in Guba-Khachmaz region, and 5% in Baku. According to the education and well-being quintile the ratio of children born with low weight reduces.

Progress has been achieved in feeding infants with breast milk. In 2000, the number of children fed with breast milk until 6 months was 28.5%, and in 2010 it became 44.3%. However, this figure is not satisfactory enough.

2. The right to health of children in existing law

The right to health is enshrined in the Constitution of the Republic of Azerbaijan in the following manner:

Article 41. The right to protection of health

I. Everyone has the right to health protection and medical assistance.

II. State on the basis of various forms of property shall take all necessary measures for development of all forms of health services, guarantees sanitary-epidemiological safety, creates possibilities for various types of medical insurance.

III. Officials concealing facts and cases that are dangerous for life and health of people shall be subjected to legal responsibility on the basis of law.

According to the Article 18 of the Law on "Protection of public health" of the Republic of Azerbaijan, medical services for children and adolescent are provided free of charge. According to the law in our country the paid services have been canceled in all of the medical institutions for children.

In 2003 the Law on "Nutrition of infants and children of their early ages" of the Republic of Azerbaijan was adopted. The Law determines the main areas of protection and promotion of nutrition with breast milk of infants and children of their early ages and the organizational and legal basis of control on manufacture, importation, advertisement and sale of artificial food products, regulates relations arising in this area.

According to the law of the Azerbaijan Republic "On Education of individuals with physical restrictions (special education)" individuals with physical restrictions have right to get special education free of charge.

3. National programs and action plans on health challenges

0041229011844

The resolution № 101 of the Cabinet of Ministers of the Azerbaijan Republic on approval of "The State Program on diabetes mellitus" dated June 7 2005;

The resolution № 211 of the Cabinet of Ministers of the Azerbaijan Republic on approval of "The Action Program on protection of health of mother and child" dated September 15 2006;

The resolution № 233 of the Cabinet of Ministers of the Azerbaijan Republic on approval of "The Action Program on improvement of blood, blood components donors and blood services in 2011 – 2015" dated December 13 2010;

The resolution № 233 of the Cabinet of Ministers of the Azerbaijan Republic on approval of "The Action Program on combating tuberculosis in 2011 – 2015"

The resolution № 225 of the Cabinet of Ministers of the Azerbaijan Republic on approval of "The Action Program on prevention of infectious diseases in 2011 – 2015" dated November 26 2010;

The resolution № 223 of the Cabinet of Ministers of the Azerbaijan Republic on approval of "The Action Program on of treatment and prevention of thalassemia" dated November 26 2010;

The resolution № 224 of the Cabinet of Ministers of the Azerbaijan Republic on approval of "The Action Program on hemophilia disease in 2011 -2015" dated November 26 2010;

The decree № 44s of the Cabinet of Ministers of the Azerbaijan Republic on approval of "The Action Program on prevention and treatment of drug abuse" dated February 25 2010.

4. Inclusion of health promotion into the school curriculum

A cooperation agreement on realization of the UNO's Global Fund's project titled "Strengthening of response measures against HIV/AIDS in Azerbaijan" is implemented in Azerbaijan Republic between the Ministry of Health and the Ministry of Education.

According to the agreement, an additional course on "Education based on life skills" was included into school curriculum in order to form sex education among young people and protect health of the youth.

With this purpose the course program on the "Education based on life skills" for I-IV, V-IX and X-XI forms and study manual "Education based on life skills" for teachers were published in number of 50 thousand copies of each edition. This program is being used in
