

**Questionnaire in relation to Human Rights Council resolution 47/24
on human rights and climate change**

1. Please describe the impacts of the adverse effects of climate change on the full and effective enjoyment of the human rights of people in vulnerable situations. Where possible, please share specific examples and stories.

The Section on Archives and Human Rights of the International Council of Archives (SAHR-ICA) is developing a pilot project to identify and map different archives in climate danger areas, focusing on Memory and Human Right Archives located in Rio de Janeiro (Brazil) and Santiago (Chile). The preliminary results illustrate that climate change may negatively and deeply impact the sustainability, continuity and content of several heritage institutions and organizations in the medium (2050) and long term (2100). For that reason, the study seeks out to encourage archivists to create climate-focused plans for mitigating their possible negative effects on the national and local archival heritage. .

According to the Universal Declaration of Archives (2011), the international archival community have recognized the importance and value of Archives as they are a unique and irreplaceable heritage passed from one generation to another, and mainly due to their significant role in the economic, social and cultural development of societies. By preserving and accessing diverse and plural national and local memories to the public, Archives enriches our knowledge about our human society, promotes transparency and democracy, and enhances the quality of life. In that sense, archives are vital in every area of human activity.

If the international archival community remains indifferent to this problem, climate change could provoke the total loss of relevant documentary sources or trigger serious damage to records that are extremely important to guarantee the rights of the citizens, especially the right of identity, memory, truth and social justice. In Rio de Janeiro (Brazil), 6 of 81 archives are located in threat zones and hence they can be destroyed or impacted by sea level and landslide susceptibility. If archives are not available, people will not have any evidence to prove their rights, like time for retirement, land and house property and even their existence as citizens.

2. Please describe any specific policy, legislation, practice or strategy that your Government has undertaken, in compliance with applicable international human rights law, to promote an approach to climate change mitigation and adaptation, as well as loss and damage that ensures the full and effective enjoyment of the human rights of people in vulnerable situations. Please also note and identify any relevant mechanisms for ensuring accountability for these commitments including their means of implementation.

In general, governments are not taking any special care for avoiding or mitigating the effects of climate change on archives. Many archives buildings are not in good condition and even the basic conditions on storage, temperature and humidity controls are not common. Very frequently electronic and digital records are not copied and reformatted in more modern softwares and their use becomes more difficult. The climate changes make this scenario even worst.

3. Please share a summary of any relevant data that captures how the adverse effects of climate change have affected people in vulnerable situations, taking into account multiple and intersecting forms of discrimination (i.e. discrimination based on a combination of multiple grounds, including disability, gender, race, colour, sex, language, religion, nationality and migration status).

4. Please describe any mechanisms and tools that are in place to measure and monitor the impacts of climate change on the full and effective enjoyment of the human rights of people in vulnerable situations.

The SAHR-ICA is making efforts in order to create a methodology that, using material available about how the cities will be affected by climate changes and also considering the location of archives, can anticipate the major dangers for the archives may occur in the future.. The idea is to have this methodology available to be used by any archival institution in order to mitigate those dangers and also giving to the

archival authorities elements to call the attention of the government and society for taking the necessary measures.

5. Please identify and share examples of good practices and challenges in the promotion, protection, and fulfilment of the human rights of people in vulnerable situations in the context of the adverse effects of climate change.

Some archives must be moved to better locations, buildings must have better conditions to avoid the problems caused by climate changes, holdings need to be well kept and digital copies must be done and kept in places and in conditions to be preserved.

6. Please include examples and good practices that highlight international and multilateral cooperation and approaches that are implemented through close consultation with and active involvement of people in vulnerable situations.
